### MESSAGE

Road safety continues to be a major developmental issue, a public health concern and a leading cause of death and injury across the world, killing more than 1.35 million globally as reported in the Global Status report on Road Safety 2018 with 90% of these casualties taking place in the developing countries and 11% alone being accounted for by India.

As per the Report on Road accidents in India 2019, the accident related deaths in India in 2019 were 1,51,113 in number. It is indeed a matter of great concern that despite the continuing efforts of the Government in this regard and our commitments for halving fatalities we have not been able to register significant progress on this front.

Ministry of Road Transport and Highways has been taking multiple initiatives including those related to vehicular and road engineering as well as educational measures for raising awareness in the field of Road Safety. The year 2019 saw the culmination of our efforts in the field of Road safety through the enactment of the Motor Vehicle Amendment Act 2019, which among other things, provides for a stiff hike in penalties for traffic violations with the aim of bringing in discipline and a responsible attitude amongst road users .

I believe that the countrywide implementation of the MVA 2019 act, in its true spirit , will mark the turning point in road related deaths in the country .

[Gen (Dr.) V. K.Singh]

## FOREWORD

Road accidents continue to be a leading cause of death, disabilities and hospitalization in the country despite our commitment and efforts. India ranks first in the number of road accident deaths across the 199 countries and accounts for almost 11% of the accident related deaths in the World.

As per the Road Accident Report for 2019, a total number of 449,002 accidents took place in the country during the calendar year 2019 leading to 151,113 deaths and 451,361 injuries. In percentage terms, the number of accidents decreased by 3.86 % in 2019 over that of the previous year, while the accident related deaths decreased by 0.20 % and the persons injured decreased by 3.86. The decline in road accidents, killings and injury reported during the calendar year 2019 appear to have been a result of the Motor Vehicle Act implemented in States from September 1st 2019 which focused on road safety and included, inter-alia, stiff hike in penalties for traffic violations as well as electronic enforcement.

The other trends noted in 2019 were very similar to those recorded in the previous years. National Highways which comprise of 2.03 percent of total road network, continued to account for a disproportionate share of 35.7 per cent of deaths in 2019 pointing to need for improved enforcement and correctives to be put on National Highways. State Highways which account for 3.01% of the road length accounted for 24.8 percent of deaths. Other Roads which constitute about 95 % of the total roads were responsible for the balance 39% deaths respectively, and electronic monitoring of the same.

Like in the previous years, the working age group of 18 – 60 accounted for a share of 84 percent in the total road accident deaths. Under the category of Traffic Rule Violations, over speeding continued to be a major killer even in 2019, accounting for 67% of the persons killed followed by driving on the wrong side of the road which accounted for 6% of the accident related deaths.

Road traffic accidents are amenable to remedial actions and the Ministry has been implementing a multi-pronged road safety strategy based on Education, Engineering (both of roads and vehicles), Enforcement and Emergency Care as detailed in Chapter 9 of the Report.

In 2019, the Ministry focused on the identification and rectification of Black spots and identified 5583 black spots in the country in 2018. The identification of these Black Spots has been a critical intervention and has helped MORTH focus and plan out its rectification efforts. The matter is being reviewed in a systematic manner with a portal being prepared for it and the progress being reviewed at the highest level periodically.

The Ministry is further working on implementing the Integrated Road Accidents (IRAD) Project under World Bank Assistance to provide a systemic solution to problem of accidents in line with international practice. Basically, the IRAD will enable capture of road accidents and geotagging of the same through a tablet provided to the first responder which is the police. The software of the project would provide back end analytics, as well as simultaneous linkage with multiple users (as in Hospitals, ambulance, Blood Banks, Vahan, Sarathi, NHAI, PWD, Courts, Insurance Companies etc.), near real time syncing and updation of data base as well as development of a mobile application for Road accidents.

It is hoped that the data on different facets of road accidents and analysis contained in this Report will be useful to policy makers in States /UTs as well as for other stake holders.

### PREFACE

The Transport Research Wing of the Ministry of Road Transport and Highways publishes an annual report on accidents, related deaths and injuries, calendar year-wise, based on information supplied by the Police Departments of States and UTs in a set of standardized formats approved by the Committee on Road Safety.

The present volume of 'Road accidents in India 2019' provides information on various dimensions of road accidents in the year 2019. It has ten sections providing a Note on methodology, overview, profile of road accidents, causes of road accidents; inter-state comparisons; share of millions plus cities; spatial and inter-temporal distribution; international comparisons; road safety initiatives taken by the Government of India and a brief write up on Motor Vehicle Amendment Act 2019 etc. A summary of the Report is available under the section titled Executive Summary.

The Report is being brought out in the backdrop of the pandemic when each organization in the Country has been coping with different level of stress. Even the "World Road Statistics - 2019" brought out by International Road Federation, Geneva has not yet been published and so TRW has been constrained to confine ourselves to the results provided in World Road Statistics, 2018.

It is our constant endeavor to enrich this document which remains a comprehensive source of accidents, related deaths and injuries in the country. **The present version consists of several new sections and has a separate section on Methodology of Data Collection (Section 1 of Report refers), greater detail on accidents on National Highways (Section 3.1 of Report refers) as well in respect of Million plus cities (Section 6 of Report refers). It also carries a new section on identification and rectification of Black spots based on the information received from States for 2018 (Para 9.1.3.1(a) of Reports refers) and a new format for studying accident related deaths in victim vehicle vs crime vehicle format (Table 3.4 of the Reports refers).**

To reduce the time lag in processing of the Road Accident document, TRW with the help of NIC has developed a software at the national level to enable integrating the accident related data collected by the States/UT with the Centre through electronic transfer as against manual transfer done at present. The software for this programme is ready and needs to be taken up for testing with States.

Before I conclude, I would like to express my gratitude to the Police Departments of all States/UTs for providing us with timely data as per set formats. From 2019, we had started calling for monthly information on accidents and related killings as against annual information to enable us to study the impact of policy changes introduced by the Ministry. Their timely response and cooperation has been a very valuable support to the Ministry.

## EXECUTIVE SUMMARY

1. **Section 1** of the report provides a note on the methodology for accident data collection followed by TRW. This is the first time such a chapter has been included in the Accident Report. This has been done to familiarize the users of the data on the methodology followed by TRW and to convey that the methodology followed by TRW is in line with the internationally followed best practices on the subject.

Data is collected by TRW from the Police Departments in standardized formats as provided by UNESCAP under the Asia Pacific Road Accident Data (APRAD) base project. The detailed formats used for this purpose are provided at **Appendix I** of the Report. The definitions of terms used in the Report are given in **Appendix II (Para 1.4 of Report refers)**

This section also addresses the challenges of accident data collection based only Police reporting. It spells out the response of the Ministry to this problem by designing the Integrated Road Accidents IRAD project aided by World Bank Assistance to provide an '**integrated**' and a "**systemic**" solution to problem of accidents in line with international practice. Basically, the IRAD project will enable capture of road accidents and geotagging of the same through a tablet provided to the first responder which is the police. The software of the project would provide back end analytics, as well as simultaneous linkage with multiple users (as in Hospitals, ambulance, Blood Banks, Vahan, Sarathi, NHAI, PWD, Courts, Insurance Companies etc.), near real time syncing and updation of data base as well as development of a mobile application for Road accidents. (**Para 1.13 & 1.14 of Report refers**)

This section also provides a broad framework for accident data collection internationally covering EU, US, Australia, NewZealand, Korea, and Sweden to enable us to benchmark the Indian performance. (**Table 1.1 & Para 1.17 of Report refers**)

2. **Section 2** of the report provides a brief overview of Road accidents in India. It underlines the commitments made by India at the third global high level conference on Road Safety in Stockholm held in 2020 to halving deaths and injuries from accidents by 2030.
3. India, ranks 1st in the number of road accident deaths across the 199 countries reported in the World Road Statistics, 2018 followed by China and US. As per the WHO Global Report on Road Safety 2018, India accounts for almost 11% of the accident related deaths in the World.
4. A total of 4,49,002 road accidents have been reported by States and Union Territories (UTs) in the calendar year 2019, claiming 1,51,113 lives and causing injuries to 4,51,361 persons.
5. In percentage terms, in 2019, the number of accidents have decreased by 3.86 percent, persons killed has decreased by 0.20% and injuries have decreased by 3.85 percent over that of the previous year i.e. 2018. Road accident severity measured by the number of persons killed per 100 accidents has seen an increase of 1.3 percentage points in 2019 over the previous year. (**Section 2.1 of the Report refers**)

6. This section also brings out that while accidents, deaths and injuries in India registered a steep rise till 2010, the same somewhat stabilised after 2010, with marginal year to year fluctuations (**Chart 2.1 in the Report refers**). Further, the CAGR of accidents as well as accident related deaths in the period 2010-2019 dropped when compared with the previous decades, despite the very high rate of growth of automobiles. (**Chart 2.2 in the Report refers**).
7. **In Section 3**, Road accidents have been profiled by road category, type of impacting vehicle, type of collision, age of victim, gender and road user category which inter-alia bring out the following:
  - (i) The Supreme Court Committee had desired greater details to be covered in respect of accidents and fatalities on NHAII jurisdiction-wise in the 2019 Report. Accordingly, additional information had been called from States in three additional formats which brings out the following:
    - a. National Highways & State Highways which account for about 5% of the total road length accounts for a disproportionately large share of accident related deaths of 61%. Other Roads which constitute about 95 % of the total road length were responsible for the balance 39% deaths respectively. (**Para 3.1.2 & Para 3.1.3 of the Report refers**)
    - b. Further, National Highways falling under the administrative control of NHAII account for 66 percent of road accident related deaths followed by National Highways falling under State PWD which account for 25 percent of Road Accident deaths. The remaining 9 percent Road Accident deaths are accounted for by National Highways under other Departments. (**Table 3.3(a) of Report refers**)
    - c. Two wheelers account for 35% of total road accident deaths on National Highways falling under NHAII, followed by cars, taxis, Vans & LMVs (18.6%) and pedestrians(14%) followed by share of Trucks of (10.7%) and share of buses of (4.9%) and share of bicycles at (2.9%). These are not very different from the percentage share for these road user categories for National Highways as a whole and accordingly requisite change in the design of the road/speed etc that may be warranted needs to be initiated by all the controlling agencies for NH. (**Table 3.3(b)of Report refers**)
    - d. **Over-speeding** accounts for the maximum share of road accident and road accident deaths (ranging between 63% to 73% for accidents and between 62% to 70% for road accident deaths) on all the categories of National Highways and thus follows the trend seen on all India basis. (**Table 3.3(c) of Report refers**)
  - (ii) At the national level as well, as per information received on persons killed by impacting vehicle, taking into account crime to victim/victim vehicle category, two-wheelers accounted for the highest share i.e. (37%) of the victims killed in 2019, pedestrians accounted for 17% of

the victims killed and Light vehicles comprising cars, jeeps and taxis as a category, ranked third with a share of 16% per cent in total accident related fatalities. (**Table 3.4 of Report refers**)

Similar conclusions are reached when the accident data is analysed from the road user angle. With Pedestrians accounting for 17% of those killed, Two wheelers accounting for 37% and cars jeeps and taxis as a category accounting for 16%. Together two wheelers and pedestrians account for 54% of the accident related killings and are the most vulnerable category quite in line with global trends. (**Table 3.4 of Report refers**)

- (iii) The number of hit and run cases in 2019 accounted for 19.4% of the deaths compared to 18.9% in 2018. Hit and run cases, Head on collision, and Hit from the back accounted for about 55% of persons killed in 2019. The category which registered the maximum increase in terms of persons killed in 2019 was collision with Fixed objects. (**Section 3.3 of Report refers**)
- (iv) During 2019, like the previous two years, young adults in the age group of 18 - 45 years accounted for nearly 69.3 percent of road accident victims. The working age group of 18 – 60 accounted for a share of 84.3 percent in the total road accident deaths. (**Section 3.3 of Report refers**)
- (vi) The share of males in number of total accident deaths was 86% while the share of females hovered around 14% in 2019.

8. **Section 4** summarizes the causes of Road accidents. Road accidents are multi-causal and are often the result of an interplay of various factors like

- (i) Human error, (ii) road environment and (iii) vehicular condition. The information received from the States/UTs on the causes of road accidents has been summarized in Section 3 and brings out inter-alia the following:
  - a. Under the category of Traffic Rule Violations, over speeding is a major killer, accounting for 67.3% of the persons killed followed by driving on the wrong side of the road which accounted for 6.1% of the accident related deaths. Use of mobile phones accounted for 3.3% of the deaths with drunken driving accounting for 3.5% of the persons killed. Further the numbers of persons killed for these reasons in 2019 were much higher than in 2018 suggesting need for improved enforcement of MVA 2019. (**Para 4.1.1 of Report refers**).
  - b. Driving without valid license/learners license accounts for about 15% of accidents. (**Para 4.1.2 of Report refers**).
  - c. About 30% of deaths can be attributed to non-use of helmets and 14% of deaths can be

attributed to non-use of seat belts. (**Para 4.1.3 of Report refers**).

- d. Vehicles more than 10 years accounted for 41% of accident related deaths. (**Para 4.3.1 of Report refers**).
  - e. Overloaded vehicles accounted for about 10% deaths. (**Para 4.3.2 of Report refers**).
9. **Section 5** of the Report provides Inter State comparisons. As in 2018, the State of TamilNadu recorded the highest number of road accidents in 2019. Similarly as in 2018, the number of persons killed in road accident was the highest in Uttar Pradesh in 2019.
10. The report examines the performance of million plus cities (fifty in number) in **Section 6** of the Report. These million plus cities accounted for 18.44 per cent of the total number of accidents and 11.78 percent of deaths in the country in 2019. These cities, while showing a declining trend in the number of accidents and numbers injured over the period 2015 to 2019, **showed an increase, in terms of accident related killings, registering a CAGR of 1.9% as compared to 0.8% at the national level for the period 2015-19**. There is also an increase in accident severity in the million plus cities over the period 2015 to 2019. (**Table 6.1 & Para 6.3 of Report refers**).

**In terms of those killed in 2019, Delhi retains its first rank followed by Jaipur, Chennai, Bengaluru and Kanpur among the million plus cities.**

11. Both road accidents and accident related killings are more a rural phenomenon than an urban phenomenon. Thus in 2019, the share of number of person killed in urban and rural area was 32.9 per cent and 67.1 per cent. (**Para 7.1.2 of Report refers**)
12. **Section 8** of the report benchmarks India internationally in terms of accident related killings. India ranks 1st in number of person killed across the 199 countries reported in the World Road Statistics, 2018.

In terms of persons killed per lakh of population, Iran Islamic Republic registered the highest number of road accident deaths per one lakh people of 20 followed by Russian Federation of 14, followed by US of 12 and followed by India and Morocco at 11.

13. **Section 9** of the Report details the initiatives taken by the Ministry which continues to implement a multi pronged road safety strategy based on Education, Engineering (both of roads and vehicles), Enforcement and Emergency Care.

This section this time includes a comprehensive write up on the initiatives taken by the Ministry in the field of identification and rectification of Black Spots. The Ministry has identified 5583 Black Spots for the year 2018. The identification of these Black Spots has been

a critical intervention and has helped MORTH focus and plan out its rectification efforts. The Black Spots have been apportioned between the implementing agencies for rectification and a portal is being developed by the Ministry for getting the status of the rectification effort at the ground level. The matter is being reviewed in a systematic manner with the progress being reviewed at the highest level periodically. (**Para 9.1.3.1(a) of Report refers**)

**The list of top ten black spots, State-wise, identified on the basis of the extent of fatalities is given at Annexure to enable prioritised attention on the same.**

14. A major initiative of the Ministry this year in the field of Road Safety has been the passing of the Motor Vehicle Amendment Act in 2019. The detailed provisions and implementation status of the Act have been summarized in **Section 10 of the Report**.

## Section – 1

### Note on Accident Data collection methodology followed by TRW, challenges and way Forward

The WHO Report on Road Traffic Injuries for 2018 has listed Road accidents as the leading cause of death for the age group 5-29 years and a growing public health concern.

- 1.2. To address this growing public health problem, there is a need for evidence based research and hence the focus on relevant and reliable data on accidents.
- 1.3. With a view to providing relevant and reliable data on accidents, Transport Research Wing (TRW) under the Ministry of Road Transport and Highways collects Accident data from the State Police Departments in standardized formats as provided by the UNESCAP under the Asia Pacific Road Accident Data (APRAD) base project. These formats were revisited by the Committee of Experts on Road Safety in 2017 comprising of Experts from IIT Delhi, IIT Kharagpur, DGPs of Police of Tamil Nadu & Tripura, representatives of WHO, Ministry of Health & Family Welfare, Secretary MoRTH and TRW when they were also discussed in regional workshops conducted by various IITs in the country.
- 1.4. At present there are 21 formats (See **Appendix I**), including three additional formats added recently at the instance of the Supreme Court Committee. Information in respect of different dimensions of accidents is sought from the Nodal Officers nominated by State DGPs for the purpose of accident data collection. Most of the nodal officers nominated are at fairly senior levels. Thus what needs to be noted is that the information on accidents is collected in standardized formats, which are internationally acceptable and are obtained from fairly responsible levels in the Police Departments. A brief note on the explanation of the terms used in this report are placed at **Appendix II**.
- 1.5. These 21 formats cover the following aspects of an accident;
  - a) Accident Identification Details
  - b) Road Related Details including related jurisdiction
  - c) Details of the Vehicles Involved in Accident
  - d) Drivers Details
  - e) Persons other than drivers involved in Accident.

- 1.6. All such data is normally called out from the States in the beginning of each calendar year and full information on the same is generally received by July end /early August every year. The data received from State Governments is then aggregated based on the soft versions received and the Report brought out. It is the endeavour of TRW to bring out the Accident Report by September/October every year.
- 1.7 Until last year, data was called for annually from the State Governments. We have now started calling for monthly data from States to enable us to study the impact of policy changes introduced by the Ministry such as the MVA 2019 etc. However, the system of monthly data is yet to stabilize as the data collection machinery in the State has been affected because of the Covid pandemic.
- 1.8. Amongst the various challenges faced by TRW are the non-receipt of information in a timely manner from the States, need for capacity building in the police stations to understand the formats and to fill them up correctly. Workshops for capacity building of the police personnel are required for this purpose which are undertaken by MoRTH from time to time.
- 1.9. Separately, in order to bring out the report in a timely fashion, TRW is in the process of developing a software with the help of NIC at the national level wherein the States would key in the required information and there would be automatic report generation at the national level. While the software is ready, it is yet to be tested.
- 1.10. The challenge faced in designing this software by NIC is the manner in which accidents data is collected in States varies and while there are some States which have very advanced software for this purpose, there are others where the process is done manually.
- 1.11 The upshot of the foregoing is that accident data at present is sourced from the Police Departments in India. The Police is the first responder in accidents and is considered to be the best source of data even though there are other sources like Hospitals and State Transport Departments. Even internationally, as per WHO's Global Status Report, almost 50% of the Reporting countries sourced their data from police with 7% sourcing from health Departments and another 11% sourcing the same from Transport Departments.
- 1.12. Amongst the critique of the existing system of collecting road accident data are:
  - (i) There is a variation in respect of accident data reported by the Police/Hospitals and the Transport Departments at the District/State and National level and consequently there is a need to integrate and link the above accident data bases. This is also in line with the current thinking that there is a need for a "Systemic solution" to be found for road safety, requiring simultaneous and coordinated action by all stakeholders like Police, Health, Hospitals, Blood Banks, Trauma Care, Transport Department, Insurance etc. This systemic solution gained currency in the 90's when some Nordic countries, found it to be an effective solution helping them to successfully reduce their accidents and fatalities.

- (ii) There is a possible under reporting of fatalities in police reported data because the deaths that take place in hospitals after 30 days will not get reported if the police and hospital data are not linked. Also because under IPC, any crime or offence has to be lodged against a human being and there cannot be any charge against a road, vehicle or any other object and hence fatalities in which the human being causing the accident cannot be identified may go unreported.
- (iii) That the data collected by Police **is not evidence based** as the policeman who goes to the spot would normally record the data after returning depending on his memory.
- (iv) That the accident data recorded is **not dynamic** and does not get updated on **a real time basis**.
- (v) That the data reported by the Police is often limited to the questions asked in TRW formats.
- (vi) That the data collected by Police is often affected by the value judgement and biases of the policeman.
- (vii) That the data collected often does not provide inputs on the real time condition of the road to enable the road engineers to take the maintenance work.

1.13. It is to address the above criticisms that Ministry of Road Transport & Highways (MoRTH) has formulated the Integrated Road Accidents (IRAD) Project under World Bank Assistance. Technical support for the project is being rendered by IIT Madras and NICSI. In the first phase, IRAD is to be implemented in 6 States namely Tamil Nadu, Rajasthan, Karnataka, Madhya Pradesh, Bihar and Uttar Pradesh.

1.14. Basically, the IRAD project involves capture of road accidents and geotagging of the same through a tablet provided to the first responder which is the police. The software of the project would provide back end analytics, as well as simultaneous linkage with multiple users (as in Hospitals, ambulance, Blood Banks, Vahan, Sarathi,NHAI, PWD, Courts, Insurance Companies etc.), near real time syncing and updation of data base as well as development of a mobile application for Road accidents.

1.15. The project is expected to be launched shortly and is in line with the systemic solutions on accident collection in place internationally.

## 1.16. International experience in collection of accident data:

A study of the framework for accident data collection internationally<sup>1</sup> is summarized in the **table 1.1** below:

Thus, any data kept in FARS data fully conforms to the Privacy Act.			Contains 189 variables. Access to the database is restricted	TAAS studies 35 different coded elements	
Systemic Analysis			Access to detailed Police crash reports is restricted to varying degree of hospital and ambulance data linked to the police reports in all of the jurisdictions, due to privacy reasons			Data base of Police, Insurance Companies & mutual aid associations is Integrated.	<b>The data in STRADA is integrated across police and hospitals.</b> By combining data from two sources, it is possible to get better data especially of pedestrians,
System components		An electronic data file is used by data analyst to interpret and code data. Annual FARS data files are available for 1975 through 2016.	Need for integrating the various systems.	GIS based analysis; collision diagrams, access to original police reports	The national crash database is not linked to road and traffic database, which do not exist even though they are required by the Road Code issued in 1992.	TAAS consists of Input Management System, a Statistical Analysis System, a Spatial Analysis System, and a Web-service System	

1.17 A review of these International best practices (EU, USA, Sweden, Australia, New Zealand, Italy and South Korea) shows the following:

- (i) Traffic crash data recording has traditionally been the responsibility of the police in all countries.
- (ii) Recognizing the limitations of data collected by police, many countries have established **specialised institutions for creating reliable traffic safety database** which can be used by policy makers at different levels.
- (iii) Usually a standardised format has been recommended in most countries. However, the level of details and accuracy of recording crash details varies in different countries with different number of variables reported upon.
- (iv) Most countries have linked police data with other data sources. However, the degree of integration varies across countries.

## Section - 2

### ROAD ACCIDENTS– AN OVERVIEW

#### 2.0 The global context

- 2.0.1 The third Global Ministerial Conference on Road Safety was held in Stockholm, Sweden on 19 and 20 February, 2020. At this conference, all the participants including India, reaffirmed their strong commitment for achieving the goals of reducing road accident related deaths by at least 50% by 2030.
- 2.0.2 Road traffic continues to be a major developmental issue, a public health concern and is a leading cause of death and injury across the World killing more than 1.35 million globally as reported in the Global Status report on Road Safety 2018 with 90% of these casualties taking place in the developing countries.
- 2.0.3 As per the World Health Organization, accident related deaths, are known to be the eighth leading cause of death and the first largest cause of death among children aged 5-14 and adults in the age 15-29. Globally, 54% of accident related deaths are pedestrians, cyclists and motor cyclists. This results in considerable economic losses not only to individuals, their families, but also to the nations as a whole. The losses are on account of cost of treatment as well as lost productivity for those killed or disabled by their injuries, loss of productivity of family members who need to take time off work or school to care for the injured etc.
- 2.0.4 Road transport remains the most favoured mode of transport for both freight and passenger movement in India. The fast-growing population, exceptional rate of motorization coupled with the ever growing urbanization has made people vulnerable to frequent road accidents resulting in fatalities, injuries/disabilities.
- 2.0.5 Road accidents in India kill almost 1.5 lakh people annually. Accordingly, India accounts for almost 11% of the accident related deaths in the World.
- 2.0.6 As per the consortium of Delhi IIT & DMITS, commissioned by MORTH to estimate the socio-economic costs of road accidents, the total estimated socio economic cost of road accidents reported by India in 2018 was Rs 1,47,114 crores which was equivalent to 0.77% of the nation's GDP.

#### 2.1 Road accidents in India 2019 & 2018–A brief outline

- 2.1.1 The position in respect of road accidents, numbers killed and injured in the last five years is given in the Table 2.1. State wise data for accidents persons killed & injured for the years 2015-18 is given at **Annexure 2 to 4**.

**Table 2.1: Road accidents, Number of persons killed and injured in the last five years 2015-2019**

Year	Total Number of Road Accidents (in numbers)	% change	Total Number of Persons Killed (in numbers)	% change	Total Number of Persons Injured (in numbers)	% change
2015	5,01,423		1,46,133		5,00,279	
2016	4,80,652	-4.14	1,50,785	3.18	4,94,624	-1.13
2017	4,64,910	-3.28	1,47,913	-1.90	4,70,975	-4.78
2018	4,67,044	0.46	1,51,417	2.37	4,69,418	-0.33
2019	4,49,002	-3.86	1,51,113	-0.20	4,51,361	-3.85

2.1.2 It will be noted that in 2019 a total of 4,49,002 road accidents were reported by States and Union Territories (UTs) killing 1,51,113 people and causing injury to 4,51,361 persons. The number of 4,49,002 accidents and 1,51,113 deaths in 2019 translates into an average of 1,230 accidents and 414 deaths every day and nearly 51 accidents and 17 deaths every hour.

2.1.3 Road accidents in 2019 compared to the previous year i.e. 2018, decreased by 3.86 percent, the number of persons killed decreased marginally by 0.20 percent and the number injures decreased by 3.85 percent.

2.1.4 One of the important reasons behind the decline in accident & accident related deaths in 2019 could be the implementation of the MVA 2019 which became effective from 1<sup>st</sup> September 2019. The Motor Vehicle Amendment Act 2019 included, inter-alia, provisions like stiff hike in penalties for traffic violations, electronic monitoring of the same, enhanced penalties for juvenile driving etc and hence had the desired impact.

2.1.5 As far as the North East is concerned, it may be seen from the Table 2.1(a) below that North East accounted for about 2.4 % of accidents, 2.7% of accident related killings and 2.3% of the injured.

**Table 2.1(a): Accidents, Killed & Injured in North East States during the calendar year 2019**

2.1.6 A comparison of the monthly data on accidents and fatalities post implementation of the MVA 2019 shows a perceptible decline in both accidents and fatalities with accidents registering a decline of 6.19% and fatalities a decline of 4.57% over the period Sept to Dec 2019 as given in the **Table 2.1(b)** below:

**Table 2.1(b): Month wise comparison of Accidents and Fatalities at All India Level**

	Accidents		Increase/ decrease	Fatalities		Increase/ decrease

(\*): Data received for all States and UTs

2.1.7 A road accident may cause a loss of life/lives or grievous injury, minor injury or non-injury to road-users. An accident, which results in death of one or more person, is a fatal accident. Grievous injury accident is one in which one or more victims suffer serious injury requiring hospitalization. Minor injury accident is one in which victim(s) does not require hospitalization. The breakup of Road accidents in the above categories in the last five years i.e. 2015 to 2019 is presented in Table 2.2. below:

**Table 2.2: Trends in the Type of road accidents (2015 to 2019)**

Type of road accident	Parameter	2015	2016	2017	2018	2019
Fatal accident	Number	1,31,726	1,36,071	1,34,796	1,37,726	1,37,689
	% age increase / decrease	4.7	3.3	-0.9	2.2	-0.03
	share in total	26.3	28.3	29.0	29.5	30.7
Grievous injury accidents	Number	1,19,668	1,20,848	1,20,971	1,25,311	1,26,759
	% age increase / decrease	3.6	1.0	0.1	3.6	1.2
	share in total	23.9	25.1	26.0	26.8	28.2
Minor injury accidents	Number	1,92,634	1,87,642	1,74,400	1,69,920	1,57,215
	% age increase / decrease	0.2	-2.6	-7.1	-2.6	-7.5
	share in total	38.4	39.0	37.5	36.4	35.0
Non-injury accidents	Number	57,395	36,091	34,743	34,087	27,339
	% age increase / decrease	2.8	-37.1	-3.7	-1.9	-19.8
	share in total	11.4	7.5	7.5	7.3	6.1
<b>Total</b>	<b>Number</b>	<b>5,01,423</b>	<b>4,80,652</b>	<b>4,64,910</b>	<b>4,67,044</b>	<b>4,49,002</b>
	<b>% age increase / decrease</b>	<b>2.5</b>	<b>-4.1</b>	<b>-3.3</b>	<b>0.5</b>	<b>-3.9</b>

What is evident from the above table is that of the total number of accidents in 2019, Minor injuries accounted for the largest share of about 35%, followed by fatal accidents of about 31% with Grievous injuries accounting for another 28%. The share of Non injury accidents accounted for 6% of the total. The share of Grievous injury accidents which accounted for 28% of the total accidents underline the need for provision of Good Samaritan laws and provision of free health care during the golden hour to save lives which has now been made a part of the MV Amendment Act 2019.

- 2.1.8 The position in terms of the number of accidents, number of persons killed and those injured by the category of Roads in 2019 is given in **Table 2.3** below:

**Table 2.3: Number of accidents, Number of persons killed and those injured by the category of Roads in 2019**

- 2.1.9 It will be seen from the above that National Highways which comprises of 2.03 percent of total road network accounted for 30.6 per cent of total road accidents and 35.7 per cent of road accident related deaths in 2019. State Highways which account for 3.01% of the total road length accounted for 24.3 percent and 25.5 percent of accidents and road accident fatalities, respectively. Other Roads which constitute about 95 % of the total roads were responsible for the balance 45 % of accidents and 38% road accident fatalities, respectively.

- 2.1.10 **Highways (both National and State) which accounted for about 5% of total road network witnessed a disproportionately large share of accidents of 55 % and accident related fatalities of 63% during the year 2019** and naturally become the focus of our attention. More accidents on these have been attributed to higher vehicles speeds and increasingly higher volume of traffic on these roads.

- 2.1.11 The State of Tamil Nadu recorded the highest number of road accidents (57,228) in 2019 while the highest numbers reported as killed in 2019 were in the State of Uttar Pradesh (22,655). Both these States have maintained their leads in terms of number of accidents and number of persons killed since 2016 despite the several road safety initiatives taken by both the Central and State Government. **The State-wise position of accidents and accident related deaths in 2019 is given in the maps 1.1 & 1.2.**

2.1.12 The reporting 50 million plus cities accounted for 18.4 percent of total road accidents, 11.8 percent of total persons killed and 16.4 percent of total persons injured in road accidents. Coimbatore ranks first in road accidents (6871) and number of persons injured (6702). Delhi ranks first in number of fatalities (1,463).

2.1.13 In terms of accident related killings by type of road user, the number of Pedestrians killed accounted for 17%, the share of cyclists was 3% and that of Two wheelers was 37%. Together these categories explain 57% of the accident related deaths and are the most vulnerable category, quite in line with global trends.

## 2.2 Analytics of Road accidents and deaths, registered vehicles and road length

2.2.1 The broad trend beginning from 1970 to 2018 in terms of road accidents, deaths, injuries, registered vehicles, road length and other derived parameters are reproduced in the **Table 2.4(i)** and **Chart 2.1** below:

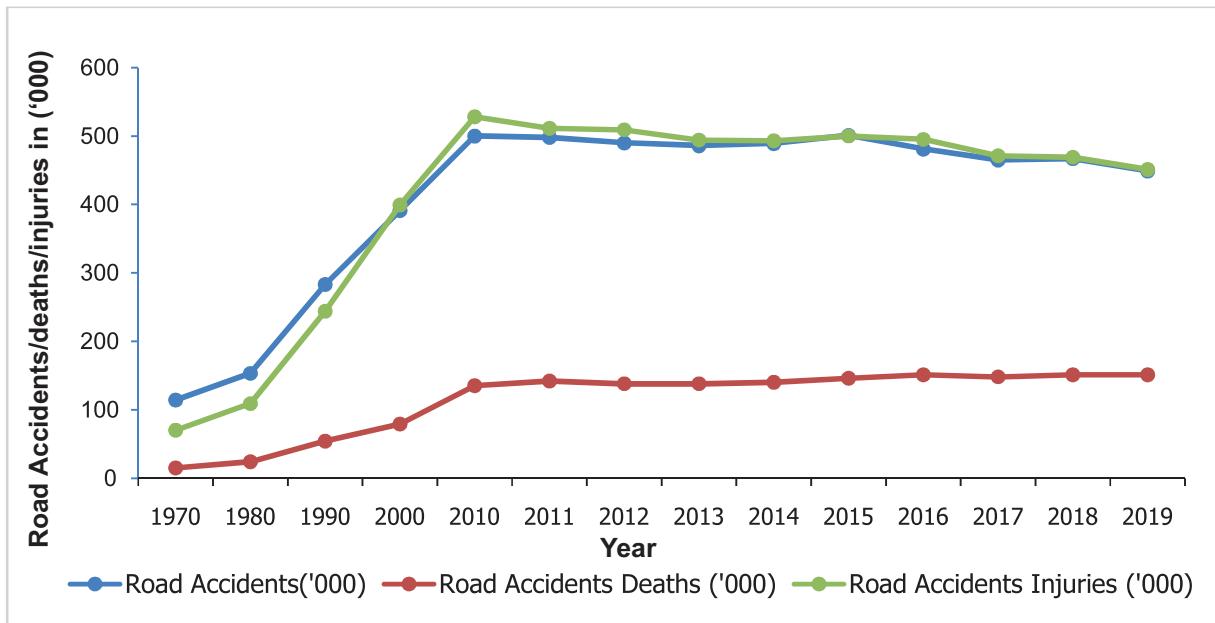

**Table 2.4 (i): Road Accidents, Registered Vehicles and Road Length in India (1970-2019)**

**Chart 2.1: Trends of Road Accidents, Deaths and Injuries**

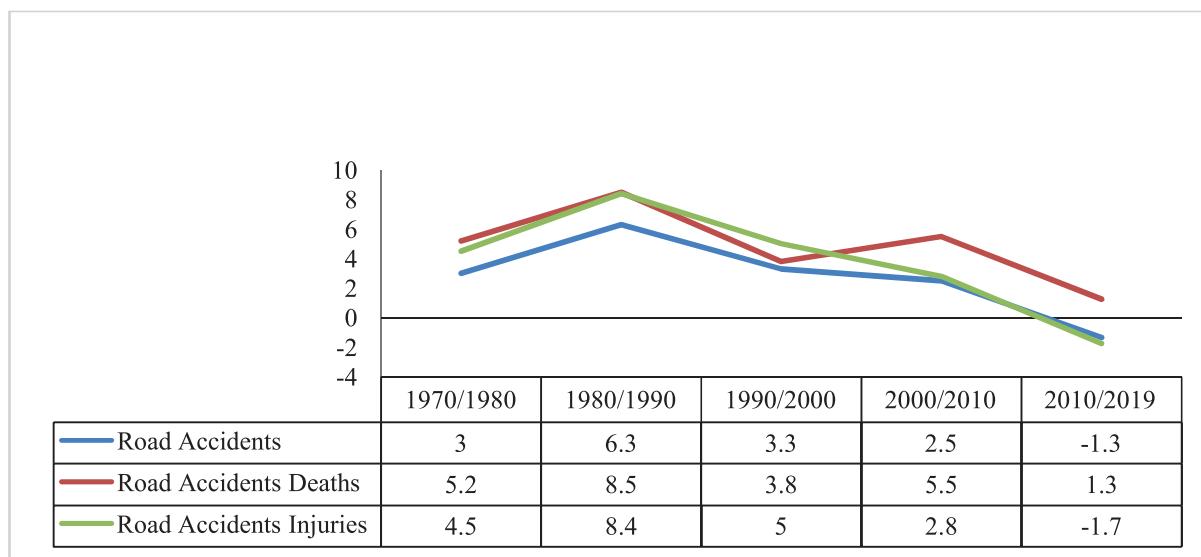

- 2.2.2 The above graph reveals a consistent increase in road accidents, accident related deaths and road injuries up to 2010 after which all three categories of accidents, deaths and injuries have stabilized with marginal fluctuations and slight decrease in 2019.
- 2.2.3 The decadal CAGR is summarized in **Table 2.4(ii)** and **Chart 2.2** below. CAGR is observed to be the highest for all the three categories of accidents, deaths and injuries during the period 1980-1990 after which there is a decline in all categories with the exception of accident related deaths. What is significant is that CAGR for the period 2010-2019 for all categories of accidents, deaths and injuries is the least compared to the previous four decades.

## Chart 2.2 Decadal CAGR of Road Accidents, Deaths and injuries (1970-2019)

2.2.4 This is despite the fact that the total number of registered motor vehicles in the country grew at a compound annual growth rate (CAGR) of 9.8 percent between 2010 and 2019(P) causing the vehicle density per kilometer to increase from 28 in 2007 to 40 in 2019.

2.2.5 Further, an analysis has been done normalizing the accidents and accident related deaths over the years by the population and number of vehicles as given in the **Table 2.5** below:

2.2.6 The graphical representation of the above indicators is shown in the **Chart 2.3** below. It will be noted from the chart that because of the steep increase in vehicle population over the years which has grown at a CAGR of 11.55% during the period 1970 to 2019, the Road accident rate normalized for vehicles, though more than the Road accident death rate, shows a downward trend. On the other hand, Road Accident Risk and Road Death Risk (normalized for population) both shows an upward trend with Road Accident Risk higher than the Death Risk.

### PROFILING ROAD ACCIDENTS BY ROAD CATEGORY, TYPE OF IMPACTING VEHICLE, TYPE OF COLLISION, AGE OF VICTIM, GENDER AND ROAD USER CATEGORY

3.0 This section profiles road accidents by road category, type of impacting vehicle, type of collision, age of victim, gender and road user category.

#### 3.1 Profiling Accidents & Deaths by road category

3.1.1 The position in terms of the number of accidents, number of persons killed and those injured by the category of Roads in 2019 is given in **Table 3.1** below:

**Table 3.1: Number of accidents, Number of persons killed and those injured by the category of Roads in 2019.**

3.1.2 It will be seen from above that National Highways which comprises of 2.03 percent of total road network accounted for 30.6 percent of total road accidents and 35.7 percent of deaths in 2019. State Highways which account for 3.01% of the road length accounted for 24.3 percent and 25.5 percent of accidents and deaths respectively. Other Roads which constitute about 95% of the total roads were responsible for the balance 45% of accidents and 39% deaths, respectively.

3.1.3 Highways (both National and State) which accounted for about 5% of total road network witnessed a disproportionately large share of accidents of 55 % and accident related killings of 61% during the year 2019 and naturally become the focus of our attention.

3.1.4 The trends of road accidents, persons killed and persons injured during the period 2015 to 2019 by road category are presented in **Table 3.2**.

State-wise & road category-wise details are given at **Annexure 9 to 19**

3.1.5 The data in **Table 3.2** on National highways reveals that between 2015 and 2019, road accidents have decreased @ CAGR of 0.90 percent, persons killed increased at a CAGR of 1.28 percent and persons injured decreased at a CAGR of 1.37%. **State Highways on the other hand have registered a negative growth rate in all three categories during this period.**

3.1.6 **Table 3.3** below provides the long-run trend over the period 2008 to 2019 of the relative share of road categories i.e National Highways, State Highways and Other Roads in Accidents, persons killed and injured at the All India level.

2019	29.4	35.7	30.5	24.3	25.5	24.8	45.2	38.9	44.7

It may be noted from the above table that the share of different categories of roads in the number of accidents, persons killed and injured has remained virtually stable, fluctuating over very small margins over the years.

3.1.7 Given the large share of National Highways in accident related deaths of about 35.7% in 2018 & 2019, the Supreme Court Committee desired to have greater detail in terms of accidents and related deaths happening on National highways jurisdiction wise i.e. by the category of accidents/deaths happening on National highways falling under the administrative control of NHAI, on National highways falling under the administrative control of State PWDs and on National highways falling under the administrative control of other Departments. Accordingly, additional information was called from States for the calendar year 2019 for these categories Road user wise and by the type of violation experienced on these segments.

3.1.8 The summary of Road Accidents and Road Accident related deaths on different categories of NH is presented in **Table 3.3(a)** below. The state wise details of Accidents and Road Accident related deaths on different categories of National Highways may be seen at **Annexure 13(A)**

**Table 3.3(a): Road Accidents and Road Accident related deaths on different categories of NH during 2019**

Sl. No.	Categories of NH	Total Accidents	Road accident Fatalities
1	National highway under NHAI	87,966	35,605
	Share in Total	64.12	66.09
2	National highway Under State PWD	38,352	13,495
	Share in Total	27.96	25.05
3	National highway under Other Departments	10,873	4,772
	Share in Total	7.93	8.86
4	Total	1,37,191	53,872

The data in above Table reveals that National Highways under NHAI account for 64 percent of road accident and 66 percent of road accident related deaths followed by National Highways falling under State PWD which account for nearly 28 percent of road accidents and 25 percent of Road Accident deaths. The remaining 8 percent accidents and 9 percent Road Accident deaths are accounted for by National Highways under other Departments.

3.1.9 The details of road user category wise road accident deaths on different categories of NH is presented in **Table 3.3(b)** while the state wise details are at **Annexure 13-B**.

**Table 3.3(b): Road user category wise Road Accident deaths on different categories of NH during 2019**

<b>Total</b>	<b>35,605</b>	<b>13,495</b>	<b>4,772</b>	<b>53,872</b>

The data in **table 3.3(b)** reveals that Two wheelers account for 35% of total road accident deaths on National Highways falling under NHAI, followed by cars, taxis, Vans & LMVs (18.6%) and pedestrians(13.9%) followed by share of Trucks of(10.7%) and share of buses of(4.9%) and share of bicycles at (2.9%) . These are not very different from the percentage share for these road user categories for National Highways as a whole and accordingly requisite change in the design of the road/speed etc that may be warranted needs to be initiated by all the controlling agencies.

- 3.10 The details of road accident related deaths on different categories of National Highways because of traffic rule violations is presented in **Table 3.3(c) and the State wise details are at Annexure 13-C.**

**Table 3.3 (c): Road Accidents and Road Accident deaths on different categories of NH by Traffic rule violations during 2019**

It may be seen from the data in **table 3.3©** that over-speeding accounts for the maximum share of road accident and road accident deaths (ranging between 63% to 74% for accidents and between 62% to 70% for road accident deaths) on all the categories of National Highways and thus follows the trend seen on all India basis.

Driving on wrong side/lane discipline and drunken driving are the other two traffic rule violations which together account nearly 10% to 12% of road accident and 9 % to 10% of road accident deaths on different categories of National Highways.

### 3.2 ROAD ACCIDENTS BY TYPE OF VEHICLES INVOLVED

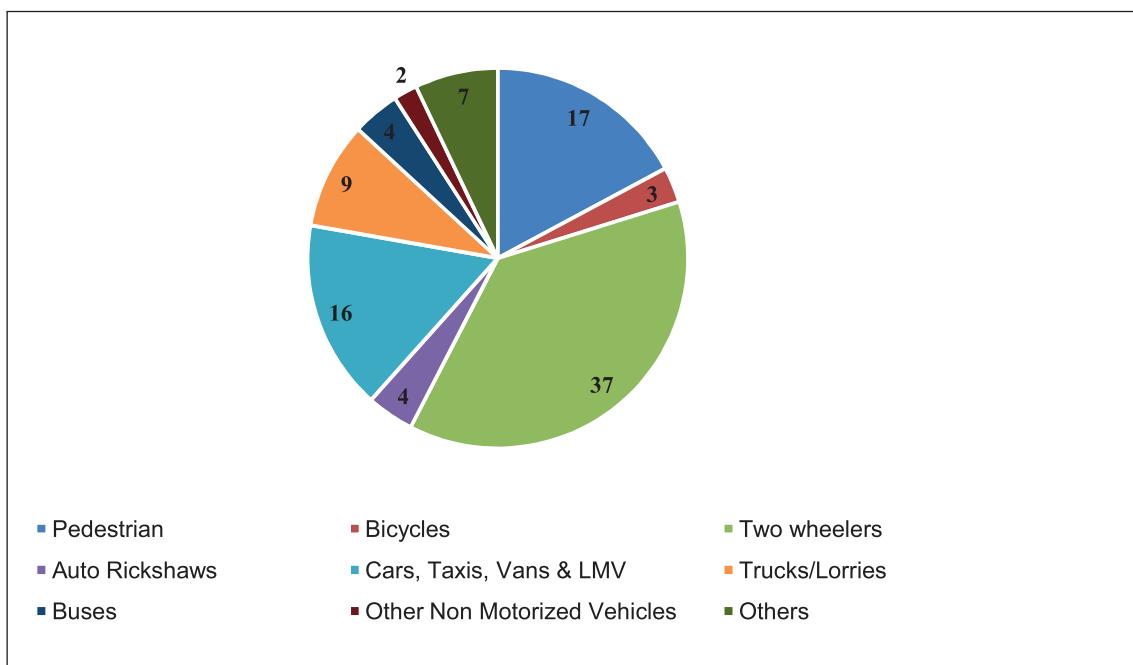

- 3.2.1 Though the road length has grown @ 3.9% per annum, the use of personalized vehicles has grown @ 10.1% during the period 2007 to 2017. As a result, the existing stock of roads are becoming increasingly inadequate to cater to the large number of vehicles plying on the roads. The level of vulnerability of road-users to accidents is consequently increasing as the same road space is being shared among wide variety of motorized, and non motorized vehicles and pedestrians.
- 3.2.2 **Table 3.4** below provides Persons killed in Accidents Classified by the type of impacting vehicles (Crime Vehicle by Victim vehicle). The State-wise details of accidents by vehicle types is given in **Annexure 26 (a) to (e)** for some categories.

- 3.2.3 This is a new format introduced from this year onward for collecting information on persons killed in accidents. The 2018 Accident Report had earlier provided accident/fatality/injury report only by type of impacting vehicle, wherein impacting vehicle meant the “Crime Vehicle”. However, we received a feedback that users were not clear by what was meant by impacting vehicles and therefore, a 9X9 matrix detailing the various categories of accident related deaths by crime vehicle and victim vehicle category have now been provided.
- 3.2.4 According to **Table 3.4** above, the number of Pedestrians killed by different categories of crime vehicles in 2019 was 25,858 which is 17 percent of the total road accident deaths. The leading three crime vehicles in terms of share of pedestrians killed are Two wheelers (26.8%), Cars, Taxis, Vans & LMV (25%) and Trucks & Lorries (16.7%).
- 3.2.5 Cyclists accounted for 3 % of those killed with the major killer categories responsible for their killing being Cars, Taxis, Vans & LMV (22.7%) and Trucks & Lorries (19.1%) and Two Wheelers being 22.4%.
- 3.2.6 The number of victims on two wheelers killed were 56,136 which is around 37% of the total road accident deaths. In terms of percentage share, the three leading crime vehicles responsible include two wheelers (34.2%), Cars, Taxis, Vans & LMV (22.2%) and Trucks & Lorries (19.1%).
- 3.2.7 The table above also reveals that as many as 23,900 occupants of cars, taxis, Vans and LMV which is 16% of the total got killed in 2019 with collision with cars, taxis, Vans and trucks accounting for a share of 43 percent followed by Trucks/Lorries (20.2%) and Two wheelers (12.6%).
- 3.2.8 Graphic presentation of the share of persons killed by type of Victim/Victim vehicle as given above is displayed in **Chart 3.1** below:

**Chart 3.1: Share of persons killed in 2019 by Victim/Victim Vehicle Categories**

It will be seen from above that during the calendar year 2019, two wheelers accounted for the highest share of 37 per cent of the total persons killed followed & pedestrian (17%) followed by car/jeep/van/taxi (16 %). Accordingly, helmet wearing has been made mandatory and increased penalties imposed for violation of this provision in the Amended Motor Vehicle Act passed by the Parliament in 2019.

3.2.9 As far as accident related killings by crime vehicle are concerned, it will be seen from **Table 3.4** above that during the calendar year 2019, two wheelers as well as car/jeep/van/taxi accounted for the highest share of 24 per cent each of the total persons killed followed by Trucks/Lorries of 21% and Buses of 10% .

### **3.3 ROAD ACCIDENTS BY TYPE OF COLLISION:**

3.3.1 The details of accidents, person killed and injured, classified according to Type of collision for the year 2018 and 2019 are summarized in **Table 3.5**. The State wise details for the year 2019 are at **Annexure 20**.

- 3.3.2 The details presented in **Table 3.5** above reveals that “Hit and run” accounted for the largest share of 19.4 % of the total persons killed in 2019, even registering an increase over the previous year of 2.6%. The MVA 2019 provides for enhanced rates of Rs 2,00,000 on the death of a victim in Hit and Run as against Rs 25,000 earlier.

The category of Hit and run was followed by “Hit from the Back” accounting for 18.4% of the total persons killed, followed by “Head on collision”, accounting for 17.7% of persons killed in 2019. A hit from the back or a rear-end collision occurs when a vehicle crashes into the one in front of it. Common factors contributing to rear-end collisions include driver's inattention or distraction, tailgating (back to back) at junctions, panic stops, and reduced traction due to wet weather or worn pavement.

Head-on collisions are known to occur on roads with narrow lanes, sharp curves, no separation of lanes for the opposing traffic and high volumes of traffic. Normally, the roads with the greatest risk of head-on collision are busy single-carriageway roads outside urban areas where speeds are highest. The greatest risk reduction in terms of head-on collision comes through the separation of oncoming traffic, through the insertion of a median separation.

Other categories like “Run” off the Road could happen due to loss of control by the driver due to excessive or inappropriate speed, distraction, misjudging a curve, attempting to avoid colliding with another road user or an animal.

The category which registered the maximum increase in terms of persons killed in 2019 was collision with “fixed objects”. In the year 2019, in terms of persons killed the most significant decrease was in the category “Head on collision” (-9.7%).

### **3.4 ROAD ACCIDENTS BY AGE PROFILE OF FATAL VICTIMS**

- 3.4.1 The age profile of accident related deaths during the years 2017 to 2019 are presented in **Table 3.6** below:

The data in **Table 3.6** reveals that road accident victims largely constitute young people in the age groups of 18 - 25, 25 - 35 and 35 - 45 and this age profile has remained the same in all the three years i.e. 2017, 2018 and 2019 underscoring major implications on economic cost of road accidents, apart from their emotional and psychological impact. During 2019, like the previous two years young adults in the age group of 18 - 45 years accounted for nearly 69.3 percent of road accident victims. The working age group of 18 - 60 accounted for a share of 84.3 percent in the total road accident deaths. Graphical presentation of age profile wise share in road accidents victims is presented in **Chart 3.2**.

### 3.5 ROAD ACCIDENTS BY ROAD-USER CATEGORY

- 3.5.1 This section examines persons killed in road accidents in India during 2019 in terms of road-user categories. A road-user is one who uses a road for movement or transportation as a pedestrian or cyclist or motorist (driver and passenger). Data in respect of this category is same as the road victim/ victim vehicle category brought out in **Table 3.7**. Data on road-user wise accident victims helps in highlighting vulnerable categories which in turn require special attention.

The degree of vulnerability to the impact of road crash differs among different road user categories. Pedestrians and cyclists are considered to be the most vulnerable road user category. The State-wise details of road accident deaths in terms of road user categories are given in **Annexure 29** and the summary is presented in **Table 3.7** below:

**Table 3.7: Comparison of Persons killed in road accidents in terms of road user categories- 2018 & 2019**

(\*)- Two-wheelers include motor cycles, scooters, mopeds

- 3.5.2 The data in **Table 3.7** reveals that amongst the road user categories, two-wheelers with a share of 37% constitute the largest number of road accident deaths (56,136) in 2019, just as in the previous year. Cars, taxis, Vans & LMVs are next highest contributor with a share of 16 percent though their absolute numbers and percentage share in the total road user category has declined as compared to 2018.
- 3.5.3 The number of pedestrians killed in road accidents has increased from 22,656 in 2018 to 25,858 in 2019 which is an increase of about 14.13 per cent. Further, Pedestrians accounted for 17.1% and Cyclists contributed to another 2.8% of the Road Users killed in 2019.
- 3.5.4 Truck and Lorries account for a share of 9.0 percent in total person killed in 2019 with its share and as well as the absolute numbers of deaths having declined in 2019 as compared to 2018. Similarly, the absolute number and share of Buses, Other motor vehicles (including e-rickshaw) have also declined in 2019 as compared to 2018. However, the share of Auto-Rickshaws has increased marginal in 2019 as compared to 2018.

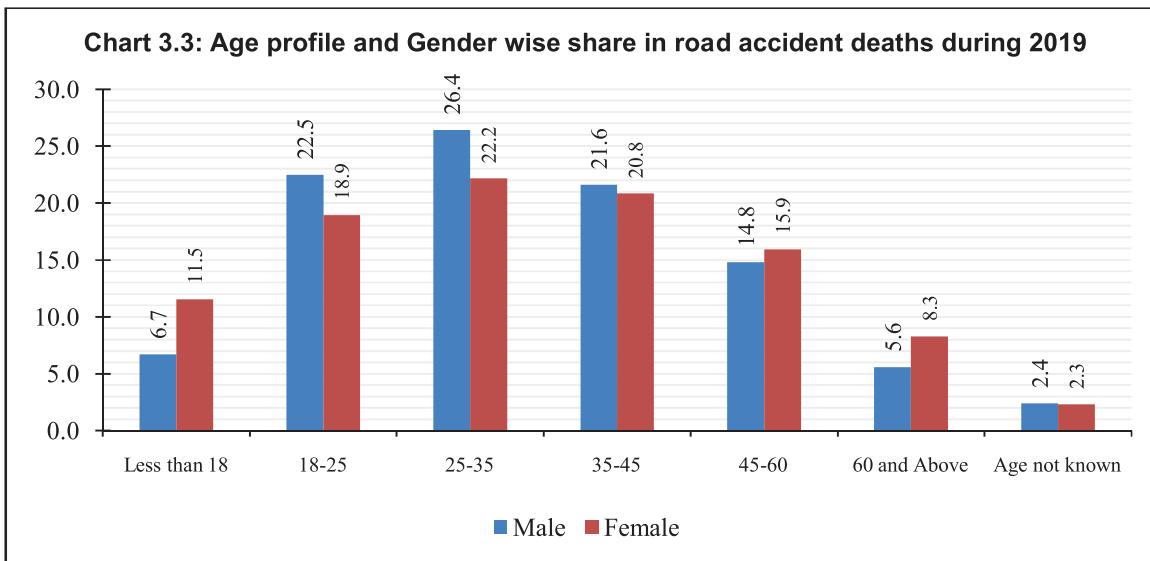

### **3.6 Gender and age profile of fatal road accident victims**

- 3.6.1 The gender-wise comparison in road accident deaths for the last three years i.e. 2017 to 2019 (**Table 3.8**) reveals that the total number of males and females killed during the calendar year 2019 were 1,29,319 (85.6%) and 21,794 (14.4%), respectively.

**Table 3.8: Gender-wise age profile of accident related deaths victims in 2017 to 2019**

- 3.6.3 Age profile and gender-wise share in road accidents related deaths during 2019 is depicted in **Chart 3.3** below while the State-wise details for the year 2019 are at **Annexure 30**.

## Section – 4

### CAUSES OF ROAD ACCIDENTS

- 4.0 Road accidents are multi-causal and are the result of an interplay of various factors. These can broadly be categorized into those relating to (i) human error, (ii) road environment and (iii) vehicular condition.

These factors act in an interactive manner to cause road accidents. Any strategy for designing the counter measures for accidents should therefore be based on a safe systems approach which simultaneously recognizes the importance of traffic legislation for promoting safe road user behaviour, safe road designs (lane width, shoulder presence, number of lanes, median, vehicle design, etc) and safe vehicle design.

The data presented in this chapter is based on the response to questionnaires/formats received from Police Departments of State Government/UTs

#### 4.1 Human Error

Accidents caused by human error include (i) cases of accidents caused by traffic rule violations, (ii) driving without valid driver license and (iii) non-use of safety devices .

##### 4.1.1 Traffic rules violations

Road accidents during 2018 and 2019 attributable to various types of traffic rules violations is given in **Table 4.1** below while State wise details for the year 2019 is presented in **Annexure 35**

**Table 4.1: Road accidents by type of traffic rules violation during 2018 and 2019**

\*Others is a residual category for tying up the totals and would include accidents /fatalities happening on account of reasons other than human error listed above and included under the category of road environment and vehicular condition.

The data in **Table 4.1** reveals that like in 2018, over speeding is the main violation associated with accidents, accident related deaths and injuries in 2019 with over speeding accounting for 71.1 percent of the road accidents, 67.3 percent of total deaths and 72.4 percent of total injuries.

Driving on the wrong side / lane indiscipline is the second most important cause accounting for 5.4 percent of the road accidents, 6.1 percent of total deaths and 5.5 percent of total injuries.

Drunken driving/ consumption of alcohol & drugs, jumping of red light and use of mobile phones taken together accounted for 6.0 percent of total accidents and 8.0 per cent of total deaths. The others category which would include reasons like road environment, vehicular condition etc. accounted for almost 17-18% of the accidents, accident related deaths and injuries.

What is most significant is that in 2019, accidents, deaths and persons killed on account of over speeding, drunken driving, jumping red light using mobile phone, all registered an increase compared to 2018 which underlines the need for stricter enforcement of the Motor Vehicle Act-2019.

#### 4.1.2 Driving without valid driver license

Vehicles driven by untrained and unqualified drivers are a serious traffic hazard and can cause accidents, death and injuries. Though the problem is basically an enforcement issue, it must

also be addressed with better facilities and opportunities for training/skilling and evaluation/testing.

The details of road accidents involving drivers without valid license and learner's license is presented in **Table 4.2** while the State wise details can be seen at **Annexure 36**

**Table 4.2: Road accidents by type of license – 2017 to 2019**

<b>Total</b>	<b>4,64,910</b>	<b>4,67,044</b>	<b>4,49,002</b>	<b>0.5</b>	<b>-3.9</b>

The data in **Table 4.2** reveals that about 72 % of road accidents involved drivers holding a valid driver license. Road accidents involving drivers without valid driving license increased from 37,585 in 2018 to 44,358 in 2019, registering an increase of 18% and accounted for 9.9% of the total accidents. Accidents involving learner's license declined from 23,593 in 2018 to 22,209 in 2018 by about 5.9% and accounted for about 4.9% of the total accidents. Together accidents without valid driving license and with learners license account for 14.8% of accidents.

#### **4.1.3 Non use of safety devices – Helmets and Seatbelts**

Non usage of safety devices such as helmets and seatbelts do not cause accidents but are critical for averting fatal and grievous injuries in the event a road accident occurs. As per data received from States/UTs, the accident related deaths on account of Non use of Helmets and Seat Belts at the All India level are summarized in the **Table 4.3** below. State-wise details of road accident victims classified by non-wearing of helmets are at **Annexure 37**.

**Table 4.3: No of persons killed due to non-use of safety devices (helmets and seat belts) during 2018 to 2019**

<b>2018</b>	28,250	15,364	43,614	<b>28.80</b>	9,349	15,086	24,435	<b>16.14</b>

Non-wearing of helmets by two wheeler riders caused 44,666 deaths and accounted for 29.82 percent of total road accident deaths in the country during 2019. The number of drivers killed were 30,148 and the passengers killed were 14,518.

Seatbelts is another safety device which is mandatory for both the driver and the persons in vehicles other than two-wheelers and three-wheelers. In fact, the protection afforded by airbags now mandated in cars is rendered ineffective if seat belts are not worn. In 2019, Non-wearing of seat belts was found to be associated with 20,885 deaths and accounted for 13.82 per cent of total road accident deaths in the country during 2019 involving 9,562 drivers and 11,323 passengers. State-wise details of road accident victims classified by non-wearing of seatbelts are at **Annexure 38**.

#### **4.2 Road Environment:**

The causes related to the category of road environment include (i) accidents happening in a particular geographical area (residential, commercial institutional etc), (ii) those related to the type of road features including straight, curved, steep etc, (iii) type of junction & type of traffic control, (iv) weather condition etc.

##### **4.2.1 Road Accidents classified by Type of neighbourhood**

Accident by type of neighbourhood (Residential area, institutional area and market/commercial area, open area etc) at the All India level are summarized in the **Table 4.4**. The State-wise figures of accidents by type of neighbourhood are given at **Annexure 21**.

**Table 4.4: Accident classified by type of neighbourhood (Residential area, institutional area and market/commercial area, open Area etc) at the All India level for 2018-19**

\* Any other type of neighbourhood not covered by the above categories

Residential area, institutional area and market/commercial area tend to have higher amounts of traffic congestion and are more prone to road accidents. However, the data received showed larger share of accidents and persons killed in open areas in both 2018 and 2019, perhaps as open areas have lower enforcement presence and may be prone to driving and traffic rule violations.

The largest increase in terms of accidents, killed and injured were recorded in the residential area in 2019 over 2018. Institutional area also recorded an increase in terms of accidents, killed and injured as compared to 2018. **This points to the need for enforcing speed control in these areas. Market/Commercial area and Open Area recorded a decline in accidents, killed and injured in 2019 as compared to the previous year.**

#### 4.2.2 Road Accidents classified by road features

Accident by type of Road features at the All India level for 2018-19 are summarized in the **Table 4.5** below. The State-wise details are at **Annexure 22**.

\*Any other feature not covered by the specified road features given above

Vehicle speed tends to be high on straight roads in open areas which corroborates the high percentage of road accidents, persons killed and injured (varying in the range of 64 - 66%) on these roads in both 2018& 2019.

The categories which registered an increase in those killed in 2019 include the categories of the Curved Road, Culvert, potholes and ongoing road works/ works under construction and need to be the focus of attention for the Engineers maintaining these roads at the national/State and local levels with safety signages installed at the appropriate spots.

#### 4.2.3 Accidents by road junction type & traffic control

Accident by type of road junction at the All India level for 2018&19 are summarized in the **Table 4.6** below; The State-wise details of accidents by road junction type are at **Annexure 23**.

(\*) any other type not covered by the specified road junctions given above such as junction with greater than 4 arms, manned and un-manned crossings. Expressways.

Road junctions are traffic merging points and hence are prone to accidents. However, the data furnished by States/UTs show that only about 28% of the accidents in 2019 took place at various types of junctions defined in the table above, with almost 72% of the accidents taking place in the “others” category. Within the junctions category, T junction accounts for the largest share of accidents, persons killed and injured.

All junctions types have different type of traffic control measures such as traffic light signals, police controlled signals, Stop sign signals, flashing signals/blinkers and uncontrolled signals. The All India position with respect to Accidents, persons killed and injured by type of traffic control is given in **Table 4.7** below, The State-wise figures of accidents at junctions by type of traffic control is given at **Annexure 24**.

The above table shows that the **largest number of accidents, persons killed and injured took place on uncontrolled crossings which accounted for 20.6 of the total accidents, 19.0% of the people killed and 19.4% of the people injured in 2019.** Further, it is noted that the maximum reduction on junctions took place under the category of “Traffic Light Signal” in the accident category and persons injured category.

#### 4.2.4 Accidents by weather condition

Accident reported by type of weather condition at the All India level for 2018-19 are summarized in the **Table 4.8** below: The State-wise details of accidents by weather condition are at **Annexure 25**.

**Table 4.8: Road accidents by weather condition – 2018- 2019**

Weather condition affects road surface condition and the visibility of the motorist, thereby increasing the chances of mishaps. Adverse weather conditions such as heavy rain, thick fog and hail storms make driving riskier as visibility reduces and road surface gets slippery.

**Table 4.8** above, shows that almost 3/4th of the accidents took place under sunny/clear weather. Accidents under adverse weather conditions such as rainy, foggy and hail/sleet accounted for only 17.3 per cent of total road accidents during 2019. **Further, both road accidents & number of accidents related deaths under different weather conditions have decreased in the year 2019 as compared to 2018 except for “Foggy & Misty” category of weather condition. The maximum increase in road accidents (19.9%) and road accident deaths (13.2%) has been under the weather condition “foggy & misty” weather condition.**

### 4.3 Accidents classified by Vehicular condition

The third category of vehicular condition includes cases of accidents associated with overloading and the age of the vehicles. This chapter attempts to report data in respect of all the above categories as reported by States/UTs.

#### 4.3.1 Accidents in over-aged vehicles

Old vehicles are prone to breakdowns and are more prone to malfunction and lack of safety. The summary of road accidents, persons killed and injuries categorized by age of the vehicles involved during 2018 and 2019 is presented in **Table 4.9** below while the State wise details are at **Annexure 27**

It will be noted from the above that vehicles 10-15 yrs of age, accounted for 12.5% of accidents, vehicles over 15 years accounted for 11.0 per cent of total accidents and vehicles with age not known accounted for another 14.6% of the total accidents in 2019. Together these categories accounted for 38.1% of accidents. The last two categories i.e. vehicles more than 15 years and age not known also registered the largest increase in accidents in 2019 over 2018.

Similarly, vehicles 10-15 yrs of age, accounted for 12.6% of accidents related deaths, vehicles of over 15 years accounted for 12.3 per cent of accidents related deaths and vehicles with age not known accounted for another 16.4% of the total accidents related deaths. **Together these categories accounted for 41.3% of accidents related deaths. The category 15 years and above also registered the largest increase in deaths in 2019 over 2018 .**

In line with the above trends MORTH is working on putting in place a policy for scrapping of old vehicles.

#### 4.3.2 Overloading

Overloaded trucks are known to cause accidents due to (i) Truck tyres bursting from excess weight; (ii) Brakes wearing out due to friction caused by the overloading; (iii) Road collapses caused by overloaded trucks; (iv) Roll-over of trucks caused by the centre of gravity shifting from overloading; (v) Excess weight adding momentum to a truck travelling downhill and severely slowing it down when travelling up an incline. An overloaded truck whose weight is shifted to the rear of the truck, makes steering much more difficult; Also, partially loaded tanker trucks carrying liquids that slosh back and forth, upset the natural centre of gravity of the truck.

In short, overloaded trucks or those with improperly secured loads can be a hazard to all other vehicles on the road. Another frequently observed feature is vehicles with loads protruding/hanging posing serious traffic hazard, risking itself and other road users.

Each state has independent control over the legal load limits for trucks. Those trucks which are oversized or over the weight limits are required to obtain a special permit, display appropriate caution warnings, drive during specific hours etc.

The summary of accidents, deaths and injured caused by overloading is given in the **Table 4.10** below. It will be seen that overloaded vehicles accounted for a share of 7.9% of total accidents, 9.5% of total killed and 8.2% of the injured in 2019. Further, it will be noted that accidents, accident related deaths, and injuries caused by overloading registered a decline in 2019 compared to 2018.

State-wise figures of accidents classified by vehicular load conditions for the year 2019 are at **Annexure 28**. It will be seen that the states of UP and Tamil Nadu rank first and second in 2019 in terms of overloading related accidents and first and fifth in terms of overloading related deaths in 2019 (as compared to first and third overloading related deaths in 2018) showing an improvement in the case of Tamil Nadu.

## Section – 5

### INTER-STATE COMPARISONS

- 5.1 This section analyses the performance of States/UTs in respect of the number of road accidents and number of persons killed during the five year period of 2015 to 2019, position of the top five States in their ranking in accidents and number of persons killed in 2019 with 2018 as also the % share of top 15 States in accidents and number of persons killed in 2019 with 2018.
- 5.2 The absolute number of road accidents and the number of persons killed across States and UTs varies widely and depends inter-alia on the size of the states/UTs in terms of population, road length, road transport, economic activity in the State/UT, quality of safety related infrastructure and enforcement etc in place.

Tamilnadu ranks 1st even in 2019 in terms of accidents despite a reduction of 10.5% over the previous year. The State of Tamilnadu also showed the maximum of reduction in accidents of

10.47% followed by Maharashtra, West Bengal , Andhra and Gujarat as may be seen by order of reduction in the **table5.2(b)** below:

5.3.3 The data in **Table 5.1** also reveals that the eight North East States<sup>2</sup> presently account for nearly 2.4 percent of the total road accidents. Their share in accidents has however, constantly increased from 1.9% in 2015 to 2.4 % in 2019.

5.3.4 Further an examination of the top 15 States in terms of accidents shows that they account for around 90% of the total accidents at the all India level in both 2018 and 2019.

## Section – 6

### ROAD ACCIDENTS IN MILLION-PLUS CITIES

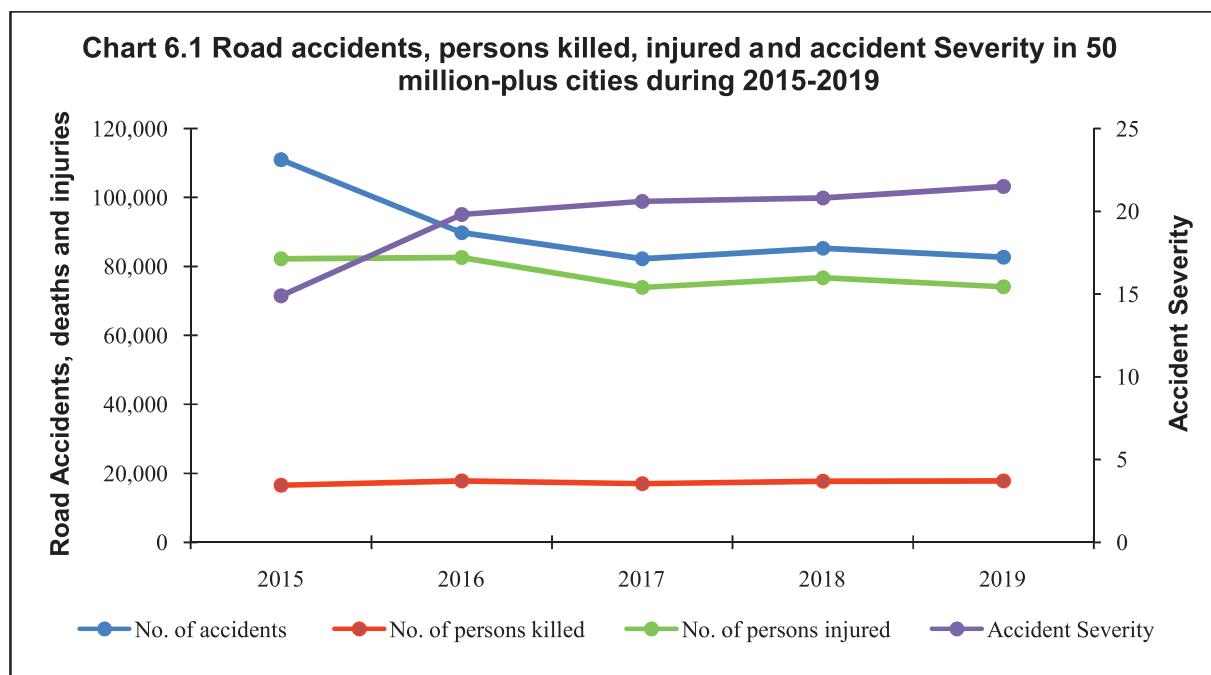

- 6.1 Urban Agglomerations because of dense population and road traffic congestion tend to have more road accidents. In this Section, an abstract of road accident statistics in respect of 50 Indian cities with population of one million has been presented in brief.

#### **Trends of road accidents in Million plus cities during 2015-2019**

- 6.2 The trends of road accidents, accidents resulting in deaths, number of persons injured etc. over the period of last five years i.e. 2015 to 2019 in respect of the 50 million plus cities, spread across 17 States and 2 UTs is given in **Table 6.1** and **Graph 6.1**.
- 6.3 These 50 million plus cities accounted for 18.44 per cent of the total number of accidents and 11.78 percent of deaths in the country in 2019

**Table 6.1: Share of 50 million-plus cities in total road accidents, number of persons killed and injured during 2015-2019**

6.8.2 The data in **Table 6.4** reveals that in respect of person killed, two wheelers accounted for the highest share of 36.2 percent followed by Pedestrian (19.0 %), car/jeep/van& LVM (15.6%), and Trucks & Lorry accounting for (8.5%).

6.8.3 Further, an examination of **Annexure 46** shows the following:

That in the two wheelers category, Chennai topped the list with 2,669 accidents and Amritsar with 74 accidents is ranked last.

Similarly in respect of Road Accident deaths, maximum deaths in the Two wheelers category were reported in the city of Chennai (514) while Srinagar reported the least number of deaths(11).

#### 6.9: Road accidents, fatalities and injuries in Million plus cities by type of traffic rules violation during 2019

6.9.1 Road accidents, fatalities and injuries due to various types of traffic rules violations at the aggregate level for 50 cities is given in **Table 6.5** below while city wise details for the year 2019 is presented in **Annexure 47**.

**Table 6.5: Road accidents, fatalities and injuries in million plus cities by type of traffic rules violation during 2019**

- 6.9.2 The data in **Table 6.5** reveals that over speeding is the main violation associated with accidents, accident related deaths and injuries in the 50 million plus cities and over speeding accounted for 64.5 percent of the road accidents, 61.2 percent of road accidents deaths and 65.1 percent of total injuries.
- 6.9.3 Over speeding like at the all India level, is the main traffic violation in the 50 million plus cities also and accounts for 53,366 (64.5%) of the road accidents, 10,855 (61.2%) percent of road accidents deaths and 48,280 (65.1%) of total injuries.
- 6.9.4 **Annexure 47** shows that the maximum accidents on account of over-speeding were reported by Bengaluru (4,143) while the least accidents were reported by Kolkata(16).In terms of road accident deaths on account of over-speeding Jaipur with 1,131 deaths ranks first, while Kolkata with 11 deaths ranks last.

#### **6.10 Road Accidents classified by road features in Million Plus cities**

- 6.10.1 Accident by type of Road features in the 50 million plus cities during 2019 are summarized in the **Table 6.6** while the city-wise details are at **Annexure 48**.

**Table 6.6: Accidents, Persons killed and injuries by road feature in Million Plus cities during 2019.**

6.10.2 Straight roads account for the highest number of road accidents, persons killed and injured in the million plus cities during 2019 and their share is around 62 percent in road accidents, road accident deaths and injuries. The other road feature which accounts the second highest share is curved roads and it accounts for 12.8 percent road accidents, 11.3 percent of road accidents deaths and 13.3 percent of injuries.

6.10.3 Road features more prone to road accidents include potholes and ongoing construction work . In the million plus cities ongoing road works/roads under construction account for 3.5 percent of road accidents, 3.1 percent of deaths and 3.8 percent of injuries. Potholes account for nearly 2 percent road accidents, 2.1 percent of road accident deaths and 1.6 percent of injuries.

## **6.11 Accidents by road junction type in million plus cities during 2019**

6.11.1 Accident by type of road junction in the 50 million plus cities are detailed at **Annexure 49** while the summary is presented in **Table 6.7** below:

**Table 6.7: Accident by type of road junction in the million plus cities during 2019**

(\*) any other type not covered by the specified road junctions given above such as junction with greater than 4 arms, manned and un-manned crossings, Expressways.

6.11.2 Road junctions are traffic merging points and hence are prone to accidents. The data of 50 million plus cities reveal that about 44% of the accidents in 2019 took place at various types of junctions defined in the table above, while the “others” category accounted for the remaining 56 % of the accidents.

6.11.3 Within the Junctions category, T-junction accounts for the largest share of accidents(13.9%), persons killed (11.7%) and injuries (13.9%). The leading five million plus cities in terms of accidents on T-Junctions are Jabalpur(962), Indore(916), Bengaluru(786), Delhi(717) and Kollam(621).

## 6.12 Accidents by type of traffic control in million plus cities during 2019

6.12.1 The details of Road Accidents, Road accident deaths and road accident injuries in the 50 million plus cities during 2019 by type of traffic control is given in **Table 6.8** below and the city wise figures are at **Annexure 50**.

**Table 6.8: Accidents, persons killed and injured by type of traffic control during 2019**

6.12.2 The above table shows that the largest number of accidents, persons killed and injures in the 50 million plus cities took place on uncontrolled crossings which accounted for 28.1% of the total accidents, 22.8% of the people killed and 27.8% of the people injured during 2019.

## Section – 7

### SPATIAL AND INTER-TEMPORAL DISTRIBUTION OF ROAD ACCIDENTS

7.0 India's population is concentrated in rural areas. As per 2011 census, 68.8 per cent of India's population lives in rural area and while 31.2 per cent lives in urban areas. Urban areas have higher population density and more vehicular traffic and hence have greater incidence of road accidents as compared to the rural areas. Apart from this social and economic activities and travel during a year and in a day also have an impact on road traffic volume and, perhaps, incidences of accidents as well. This Section examines the distribution of road accidents statistics between rural areas and urban areas, across different months in a year and also for different time intervals of a day.

#### 7.1 Road accidents in urban and rural areas

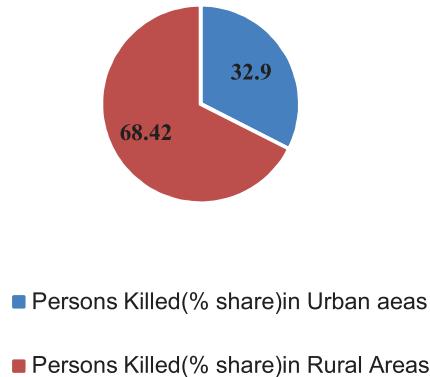

7.1.1 The trend of road accidents in urban and rural areas over the last five years (i.e. 2015 to 2019) is presented in **Table 7.1** while the State wise data is at Annexure 39.

**Table 7.1: Number of road accidents, persons killed and injured in Rural and Urban areas-2015 to 2019**

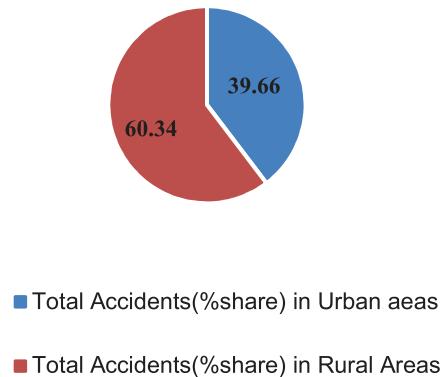

Year	Urban Area			Rural Area			Total		
	Total Accidents	Persons Killed	Person Injured	Total Accidents	Persons Killed	Persons Injured	Total Accidents	Persons Killed	Persons Injured

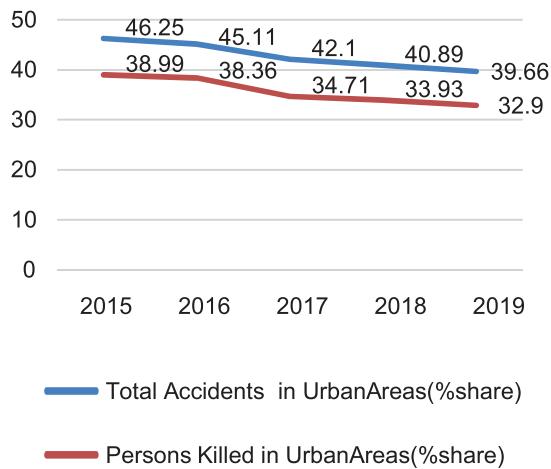

**Chart 7.1(a): Share of persons killed in Urban and Rural areas in 2019**

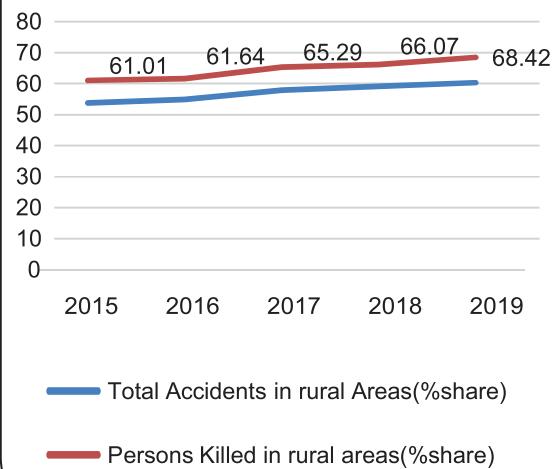

**Chart 7.1(b): Share of Accidents in Urban and Rural areas in 2019**

**Chart 7.2(a): Percentage share of persons killed and Accidents in Urban Areas**

**Chart 7.2(b): Percentage share of persons killed and Accidents in Rural Areas**

- 7.1.2 The data in **Table 7.1** and **charts 7.1 & 7.2** reveals that both road accidents and accident related killings are more a rural phenomenon than an urban phenomenon. Thus in 2019, the share of number of person killed in urban and rural area was 32.9 per cent and 67.1 per cent, respectively while that of road accidents in urban and rural area was 39.7 per and 60.3 per cent respectively.
- 7.1.3 Further, the share as well as the number of persons killed and accidents in Urban areas has declined as compared to the respective shares in rural areas which has increased over the period 2015-19(**chart 7.2** above refers).

## 7.2 Trends in Month-wise distribution of road accidents

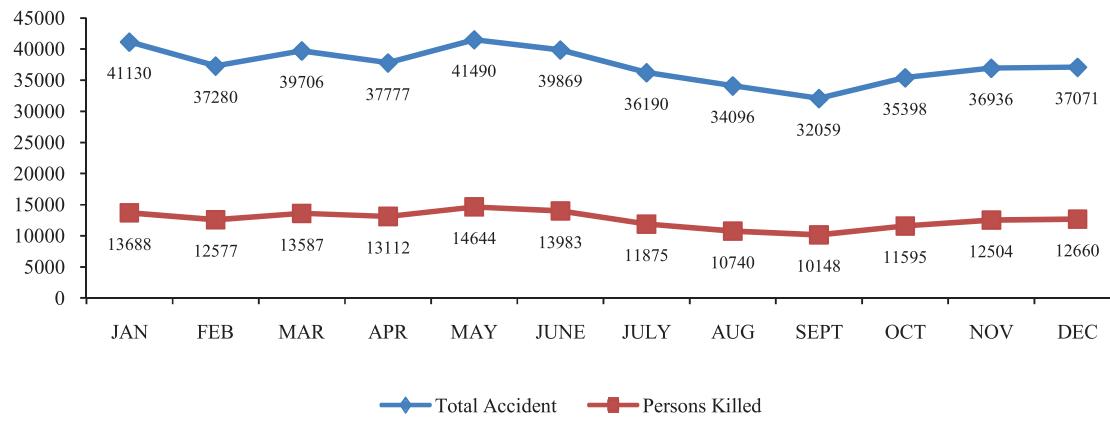

- 7.2.1 The aggregate data on month-wise distribution of road accidents for the period 2015 to 2019 is given in **Table 7.2**

**Table 7.2: Trends of month wise distribution of Road accidents from 2015-2019**

- 7.2.2 The month wise data on road accidents presented in **Table 7.2** reveals that over the period of five years (2015 to 2019) the months in which the maximum number of accidents and maximum number of road accident deaths occur are May, June, March, January and December. The state wise data at **Annexure 42** reveals that major States such as Tamil Nadu, Madhya Pradesh, Uttar Pradesh, Karnataka and Kerala recorded higher number of road accidents in the month of May, June, July and January.
- 7.2.3 The month-wise distribution of total accidents and person killed for the year 2019 is depicted in **Chart 7.3**.

**Chart 7.3: Month wise distribution of number of road Accidents and persons killed during 2019**

- 7.2.4 The data on month wise distribution of road accidents and number for person killed during the year 2019 as plotted in **Graph 7.3** reveals that peak month for road related deaths is May followed by June, January, March & April. The period July to September has lesser number of accidents and road accident related deaths.

### 7.3 Trends in Time interval-wise distribution of road accidents

- 7.3.1 The five yearly trend in time interval-wise distribution of road accidents is presented in **Table 7.3** while the data for 2019 is at **Annexure 42**

**Table 7.3: Number of road accidents by time interval of day during 2015- 2019**

- 7.3.2 In 2019, the time interval between 18:00 - 21:00 hrs (Night) recorded maximum number of road accidents, accounting for 19.3 per cent of the total accidents in the country and this is in line with the pattern seen over the past five years. The second highest time interval of a day was between 15:00 - 18:00 hrs (Day) constituting 17.5 per cent of road accidents. As per the data, afternoon and evening times are the most dangerous times to be on the road. The time interval of 0.00 hrs to 6:00 AM has the least number of accidents.

## Section – 8

### International Comparison of Road accidents

- 8.0 A comparison of select indicators published in World Road Statistics, 2018<sup>3</sup> of International Road Federation has been undertaken with the objective of positioning India viz-a-viz other countries in terms of road accidents and corresponding number person killed, injured and rates per lakh people.
- 8.1 The details of Accidents, person killed and persons injured in respect of top 20 countries by total injury accidents is presented in **Table 8.1**

- 8.2 Data in **Table 8.1** reveals that India ranks 3rd in terms of total accidents, across 199 countries as reported in the World Road Statistics, 2018. India's incidence of accidents is 36 per lakh people which is much lesser than that of USA (684), and Japan (393).
- 8.3 India ranks 1st in number of person killed across the 199 countries reported in the World Road Statistics, 2018.
- 8.4 India ranks 3rd in terms of persons injured after United States of America and Japan.
- 8.5 Country wise number of persons killed per lakh of population in respect of the top 20 countries as per World Road Statistics, 2018 is depicted in **Chart 8.1**.
- 8.6 The table below shows that Iran Islamic Republic registered the highest number of road accident deaths per one lakh people of 20, followed by Russian Federation of 14 followed by US of 12, followed by India & Morocco at 11.

## Section – 9

### ROAD ACCIDENTS MITIGATION MEASURES TAKEN BY MORTH IN RECENT PAST

- 9.0 India is committed to bringing down fatalities from road accidents by 50 percent by 2030 as a signatory to the Stockholm declaration. It is clear from the report that road accidents are multi-causal which requires multi-pronged measures to mitigate road accidents through concerted efforts of all Government agencies both at the Centre as well in the State.
- 9.1 The Ministry has formulated a comprehensive National Road Safety Strategy to address the issue of road safety. This provides the framework for National collaboration on road safety improvement and allow for a move towards VISION ZERO. This strategy covered themes on Education, Publicity and awareness campaigns, Engineering (both of roads and vehicles), Enforcement and Emergency Care. Various road safety interventions taken up by the Ministry across themes in the last year are showcased below:
- 9.1.1 **IRAD:** The Ministry has launched the Integrated Road Accident Database (IRAD), a robust road accident database management system developed and being implemented with the help of Indian Institute of Technology, Madras, NIC and supported by World bank. This will enable the States and Centre to comprehend the information related to road accidents, analyses the root cause of road accidents and to develop and implement 'data-led' road safety interventions to reduce accidents. The IRAD is currently planned to be piloted in 6 States.
- 9.1.2 **Improved road use behaviour:**
- (a) **Driver Training:** Government is taking steps to strengthen the system of driver licensing and training to improve the competence and capability of drivers.
- **IDTR:** Institute of Driving Training and Research (IDTR) are being established by GoI for setting standards and monitoring driver training and issue of driving license based on an objective scientific process of testing skills. Model IDTR in Tier 1 Cities shall have adequate land (10 to 15 acers) and shall include complete infrastructure required for modern IDTR. The Central Government may provide 100% of the capital investment subject to maximum of Rs.18.50 Crore. Till date 29 IDTR has been sanctioned, out of which 16 are operational and the remaining are under construction.
  - **RDTC:** Regional Driving Training Centre (RDTC) are tier -II centers, with minimum land requirement of 3 acres with basic support infrastructure including testing tracks. These are expected to be setup and operated by the private sector on a PPP mode with the State Government. A financial assistance of maximum of 5 Crore per RDTC will be provided by the Central Government as per the scheme. Till date 5 RDTCs have been sanctioned which are in different stage of construction.

- **DTCs:** Guidelines for the “Scheme for setting up of Driving Training Centres (DTC)” has also been issued by MoRTH. DTCs are planned to be established at district level to provide quality training to commercial vehicle drivers to improve road and environment safety and strengthen overall mobility on roads. Under the scheme, the Ministry shall provide one-time assistance to the extent of 50% of the project cost, subject to a maximum of Rs. 1.00 crore, for setting up the DTC.

#### **(b) Publicity and awareness campaigns**

- ❖ **Spreading Awareness through TV, Films, Radio Spots and Print media:** The Ministry has been making various efforts to make road safety a social Movement. The Government has been undertaking various publicity measures in the form of telecasting on T.V, Radio, Cinema, printing calendars with road safety messages as also by conducting seminars & exhibitions on road safety with messages for various segments of road users viz. Pedestrians, cyclists, school children, heavy vehicle drivers, etc.
- ❖ **Appointment of Shri Akshay Kumar as Road Safety Brand Ambassador:** Launched three short films for generating public awareness towards road safety.
- ❖ **Road Safety Awareness Workshops Conducted in States:** Ministry has sponsored State Governments led workshops for sensitization of stakeholders on road safety in different States.
- ❖ **Involvement of NGOs and other Stakeholders:** Road safety is an issue that can only be addressed together with all stakeholders-State Government, Corporate houses, Auto industry and their associations, Universities, institutions, Non-Governmental Organizations and the society at large. Therefore, the ministry has decided to engage NGOs to create awareness about road safety among general public and carry out road safety advocacy. For this, MoRTH have introduced a scheme for financial assistance to NGO for administrating Road Safety advocacy. For the financial year 2019-2020, Ministry have sanctioned 334 proposals, whereas 203 NGOs were provided with financial assistance in 2018-19. In addition, three awards (first, second and third) awarded in each State/ UTs to the individuals or agencies engaged in road safety advocacy and allied activities to recognize the outstanding work carried out by them. Following are some of the relevant activities/programmes considered for financial assistance;
  - Raising road safety consciousness among the road users
  - Organization of camps for vision testing/ distribution of spectacles for the drivers of Commercial vehicles
  - Publicity Campaign on road safety

- Sponsoring/ financing of publication of popular literature on road safety
  - Organizing quiz competitions, essay competitions, painting competitions, for school/college students
  - Cultural activities/ events promoting road safety, like puppet shows/ plays etc.
  - Organizing seminars on subjects like 'Don't over-speed', 'Don't drink & Drive', 'follow lane discipline', 'be alert on road', 'helmet usage', 'seat belt usage'
  - Good Samaritans
- ❖ **31st National Road Safety Week:** The Ministry observes National Road Safety Week every year with the objective of creating awareness on road safety. The 31st Road Safety week was observed between 11 January and 17th January 2020. Following are some of the activities carried out during the road safety week;
- Rally with participation of school children, NGOs, Stakeholders in Road safety from government and Industry organized by MoRTH, Gandhi Smriti and Darshan Samiti and Ministry of Culture.
  - Unveiling of a new road safety mascot and launch of Integrated Road Accident Database (IRAD) and National Highways Management Systems with World Bank
  - Seminar on new technologies and vehicular safety in association with SIAM
  - Award for best performance in road safety for States and by NGOs
- ❖ **Research in Road Safety:** The Government encourages increased activity in programmes of road safety research by identifying priority areas, funding, research in those areas adequately and establishing centres of excellence in research and academic institutions. The Government will facilitate dissemination of the result of research and identified examples of Good practice through publication, training, conferences, workshops and websites.

### **9.1.3. Engineering (both of roads and vehicles) measures:**

9.1.3.1 Road Engineering measures taken by the Ministry are as follows:

#### **(a) Identification and rectification of accident black spots:**

Road accident black spot is a stretch of National Highway of about 500m in length in which either 5 road accidents (in all three years put together involving fatalities/grievous injuries) took place during the last 3 calendar year or 10 fatalities (in all three years put together) took place during the last 3 calendar years.

Based on the above definition, the Transport Research Wing of Ministry over the last year has identified **5583 Black Spots for the year 2018 (Annexure 51 refers)**. This however does not

include information from Sikkim and five other UTs who did not submit required information. The exercise for identification of Black Spots was started by TRW in November 2018 on the request of the Supreme Court Committee as the earlier data on Black Spots pertained to 2014. A letter was written to States requesting them to provide explicit chainage, police stations involved and accident and fatality data for the preceding three years meeting the above criterion to identify the Black Spots.

These Black Spots since received were further apportioned between NHAI, NHIDCL and the Engineering Wing under MoRTH to enable them to undertake the necessary rectification measures.

The Black Spots are now being classified by the above mentioned Road construction/maintenance agencies based on whether short term measures (like rumble strips, lighting or signages need to be installed or long term measures like road design/elevation , Road widening, building of Road overbridge, Byepass, flyover, cattle underpass etc. is needed.

Ministry vide its circular dated 26<sup>th</sup> August 2019 has delegated power to Regional officers for Technical sanction upto Rs 50 crore per black spot including Land Acquisition. Road Safety Expert @ Rs 7.5 lakh per black spot may also be engaged for the work.

A portal is also being developed by the Ministry for getting status/progress of rectification measures on black spots on real time basis. All the regional officers of Ministry and NHAI and PDs of NHAI and NHIDCL and concerned persons with the HQ of Ministry, NHAI and NHIDCL have been provided the user ID and password for filling up rectification details such as immediate/temporary and permanent repair details (provisions proposed/made, repair status, sanctioned cost, etc.), photographs/video of Black spot works before and after rectification.

The identification of these Black Spots has been a critical intervention and has helped MORTH focus and plan out its rectification efforts. The matter is being reviewed in a systematic manner with the progress being reviewed at the highest level periodically

**Though the complete list of Black Spots in 2018 will be posted soon on the portal , due to limits of space , the list of top ten black spots State-wise identified on the basis of the extent of fatalities is given at Annexure to enable prioritised attention on the same(Annexure 52 refers).**

- (b) Road Safety Audits:** Detailed guidelines for taking up road safety audits on National Highways have been notified. Road safety Audits have been made part and parcel of all National Highway development projects on EPC/BOT modes. Ministry has issued circular which makes it mandatory to carry out road safety audit for all new road projects having length of 5 km or more at the stage of Detail Project Report (DPR)/Engineering Design.

**(c) Traffic Calming Measures:** Ministry of Road Transport & Highways advocates use of Traffic calming measures at accidents prone areas. Indian road congress has published IRC 99: Guidelines for traffic calming measures in May, 2018 which prescribes various traffic calming techniques/measures.

- rumble strips or bar marking at the approaches of the major junctions on NHs,
- speed limit signs at desired locations of NHs network,
- speed breaker and associated signage on side roads,
- flashing amber beacons for traffic approaching a junction or a mid-block median opening of NHs

**(d) Installation of crash barriers**

Road-side Safety Crash barriers are installed at roadside hazards as per provisions mentioned in “Manual of specifications and standards for 2/4/6-lane highways”. Provision of crash barriers at all the required locations is an integral part of NH development/improvement project. Moreover, Ministry has also taken up installation of crash barriers on National Highways in hilly states at accident prone locations.

**(e) Training and capacity building**

Ministry of Road Transport & Highways supports the idea of capacity building in the field of road safety. An audit of road safety is essential to reduce the possibility of road accidents through corrective measures. A certification course for Road Safety Auditors was conducted by IAHE and 116 auditors have been certified.

**9.3.1.2.1 Vehicular engineering measures :**

The Government is taking steps to ensure that safety features are built in at the stage of design, manufacture, usage, operation and maintenance of both motorized and non-motorized vehicles in line with international standards and practices in order to minimize adverse safety and environmental effects of vehicle operation on road users (including pedestrians and bicyclists) and infrastructure. Prominent among various notifications issued by the Ministry in this regard are as follows:

- ❖ **Automatic Head Light On:** In a bid to make roads safer for two-wheelers in India, the Ministry has mandated 'Automatic Headlamp On' (AHO) in two wheelers.
- ❖ **Crash Tests:** The crash tests for all the light motor vehicles have been notified by the Ministry for implementation.
- ❖ **Air Bags:** AIS- 145 safety norms kicked in from July 1, 2019 and make it mandatory to have fitment of driver Air Bags, seatbelt reminder for driver and co-driver, rear parking sensors and an overall speed alert on all the LMV passenger vehicles.

- ❖ **Bus Body Code:** Ministry has notified the bus body code.
- ❖ **Truck Body Code:** Ministry has notified the truck body code.
- ❖ **Speed Alert System in Cars:** All cars manufactured after July 1, 2019, will have to be equipped alert systems for speeds beyond 80kmph.
- ❖ **Red Beacon Lights:** With a view to strengthening healthy democratic values in the country, MoRTH has notified doing away with beacons of all kinds atop all categories of vehicles in the country, except those connected with emergency, operation & relief services, etc.
- ❖ **Amendment in rule 62 (Divyang friendly features in buses):** draft notification on addition of following items in rule 62 of CMVR
  - i. Priority Seats, Signs, securing of crutches/ canes/walker, handrail/stanchions, controls at priority seats for differently abled passengers and passengers with reduced mobility' and
  - ii. Wheelchair entry/housing/locking arrangement for wheelchair for differently abled passengers and passengers with reduced mobility).
- ❖ **Vehicle location tracking device:** Vehicle categories such an E-rickshaw and three-wheelers are added in the section 125-H for mandatory provision of location tracking device and one or more emergency buttons.
- ❖ **Retro reflective tape:** Addition of item in vehicle inspection checks for reflectors. Additionally, the color of the reflectors and reflective tapes should be inspected to ensure it is as per rule 104 in CMVR.
- ❖ **Anti-lock Braking System & Electronic Stability Control:**
  - i. Compulsory Anti-lock Braking System (ABS) System in M1, M2 Categories and two-wheeler: ABS made compulsory from 1st April 2018 in new vehicles and from 1st April 2019 in existing vehicles of the M1, M2 and two-wheeler.
  - ii. Vehicles of category M2 manufactured on and from 1st day of April, 2021, in case of new models and 1st day of April, 2022, in case of all models, shall be fitted with Anti-Lock Braking System conforming to the IS 11852:2013 as amended from time to time.”
  - iii. Vehicles of category M3, N3 and N2 other than tractor-trailer combination meant for carrying hazardous goods and liquid petroleum gas, manufactured on and from 1st day of April, 2021 in the case of new models and 1st day of April, 2022 in case of all models, shall be fitted with Anti-Lock Braking System conforming to IS:11852:2013, as amended from time to time.”
  - iv. M1 and N1 categories of vehicles manufactured on and after, 1st day of April, 2021 in the case of new models and 1st day of April, 2022 in case of all models, and if provided with Electronic Stability Control Systems shall meet the

requirements as specified in AIS:133-2016, as amended from time to time, till the corresponding BIS specifications are notified under the Bureau of Indian Standards Act, 2016 (11 of 2016).

- v. M1 and N1 categories of vehicles if provided with Brake Assist System manufactured, on and after 1st day of April 2021 in the case of new models and 1st day of April, 2022 in case of all models shall conform to AIS:152:2018 amended from time to time, till the corresponding BIS specifications are notified under the Bureau of Indian Standards Act, 2016 (11 of 2016)."

#### **9.1.4 Enforcement measures:**

- a) **Motor Vehicle Amendment Act(MVAA), 2019 and its implementation:** MoRTH through its notification on 28th August 2019, appointed the 1st day of September 2019 as the date on which a list of sections MVAA 2019 as mentioned in the S.O. 3110(E) - comes into force. In addition, several new provisions have also been mandated through MVAA 2019 to enhance safety and compliance of CMVR 2019 which are related to vehicle scrapping policy, vehicle recall system, institutionalized mechanism for accident data analytics, national register for vehicle registration, driving license and electronics surveillance & monitoring, etc.
- b) **I & C centers:** As mandated in Section 56 of Motor Vehicle Act, 1988 (amended vide MVAA 2019), all fitness of vehicles from a notified date shall be done through automated testing station. The Ministry is also in the process of implementing a fitness regime for vehicles by setting up of one model automated Inspection & Certification (I&C) centre in each State/UT for fitness tests of vehicles. Till date, 25 such model centers have been sanctioned by the Ministry, of which 7 centers have started functioning and several more I&C centres would be completed in near future. Central Government through this scheme, will fund the capital cost of setting up the I & C center, while the land requirement and the operating and maintenance cost (after initial two year) shall be arranged by the State governments.
- c) **Promoting Intelligent Transport System (ITS)**
  - **E-Challan:** Comprehensive enforcement solution developed on android platform and web application
  - **M-Parivahan:** For citizen and transport operators to access various transport related services like payment of Road tax, applying for various services and appointment with RTO and upload of document
  - **Transport Mission Mode Project:** All the state and UTs using application VAHAN (for vehicle registration) and SARATHI for driver license
- d) **Enforcement of Road Safety Laws:** Actively encourage establishment and strengthening

of Highway Patrolling on National and State Highway Patrolling on National and State Highways in cooperation with State Government and UT Administrations.

**e) Electronic Monitoring and Enforcement of Road Safety:**

- According to Section 136A under MV Amendment Act (2019), State Governments shall ensure electronic monitoring and enforcement of road safety on National Highways and State Highways or in any Urban cities which have a population up to such limit as prescribed by the Central Government.
- The Central Government shall make rules for the electronic monitoring and enforcement of road safety including speed cameras, closed-circuit television cameras, speed guns, body wearable cameras and such other technology.
- The technology installed by the State may capture information, as per the requirements of the offences.

**9.1.5 Emergency (Post-crash response and Trauma care)**

- a) Effective Trauma Care:** NHAI provides ambulance at 50 -60 KM on its completed stretches of NH. Cranes and ambulance are provided to various State Government under the **National Highway Accident Relief Service Scheme** for the development on NH.
- So far 347 ten-ton cranes ad 106 small/medium size cranes have been provided
  - 509 ambulance have been provided to State/UTs/NGOs under the scheme
  - Further, MoRTH has also provided 140 advanced life support ambulance to 140 identified hospitals upgraded under the Ministry of Health and Family Welfare's scheme 'Establishment of an integrated network of Trauma Centers' along the Golden Quadrilateral, North- South and East –West Corridors
- b) Motor Vehicle Accident Fund and Cashless Treatment during Golden Hour:** The Central Government is planning to introduce a scheme for the cashless treatment of victims of the accident during the golden hour and such scheme will contain provisions for creation of a Motor Vehicle Accident Fund for to provide compulsory insurance cover to all road users in India. It will be utilised for: treatment of persons injured in road accidents as per the golden hour scheme, compensation to representatives of a person who died in a hit and run accident, compensation to a person grievously hurt in a hit and run accident, and compensation to any other persons as prescribed by the central government. The Act also provides to develop a scheme for cashless treatment of road accident victims during golden hour, i.e. the time period of up to one hour following a traumatic injury, during which the likelihood of preventing death through prompt medical care is the highest.
- c) Good Samaritan Guidelines:** Ministry had earlier issued guidelines to protect the Good Samaritans from harassment on the actions being taken by them to save the life

of the road accident victims. Good Samaritan guidelines The MV Amendment Act 2019 to help road accident victims, Good Samaritan guidelines have been incorporated. The Amendment defines and protects Good Samaritans who voluntarily, in good faith and without expecting a reward, render emergency medical or non-medical assistance to a victim at the scene of an accident or transports the victim to a hospital.

- d) **Compensation payable to road accident victims** – The minimum compensation **for hit and run cases** has been increased in case of death from Rs 25,000 to Rs. 2,00,000 and for grievous injury from Rs 12,500 to Rs 50,000. The Centre is empowered to make a scheme for providing interim relief to claimants seeking compensation under third party insurance. The compensation in case of death or grievous hurt arising due to use of vehicles, has been fixed at Rs. 5,00,000 for death and Rs. 2,50,000 for grievous hurt. Claim process has been simplified. Insurance firms have to pay claims within a month, if the victim's family agree to accept Rs 5 lakh compensation.
- e) Drivers and Co-driver/helper(s) have been included as third parties, for the purpose of insurance.
- f) Central Government is empowered to prescribe the minimum premium and corresponding liability for third party insurances.

The central government will also make a scheme for providing interim relief to claimants seeking compensation under third party insurance. The MV Amendment Act, 2019 increases the minimum compensation for hit and run cases as follows: (i) in case of death, from Rs 25,000 to two lakh rupees, and (ii) in case of grievous injury, from Rs 12,500 to Rs 50,000.

## Section – 10

### Brief on the Motor Vehicles (Amendment) Act, 2019 and its implementation Status

- 10.1 The Motor Vehicles Act, 1988 is the principal instrument through which road transport is regulated in the country. The same has been amended first time in a comprehensive way, after thirty years by The Motor Vehicles (Amendment) Act, 2019, passed by the Parliament and published in the Gazette of India on 9<sup>th</sup> August 2019.
- 10.2 The Act is expected to bring reforms in the various segments as delineated in the chart below and elaborated upon in the subsequent paras:

- A. Strengthening Enforcement and Road Safety**
- Stricter penalties to improve deterrence effect
  - Minimum Penalty of Rs 500 as against present amount of Rs 100 for minor offences
  - Stricter penalties for Juvenile offences
  - Drunken driving -Penalty increased to Rs 10000 from present level of Rs 2000 and suspension of license
  - Impounding and suspension of License in case of over speeding, dangerous driving, drunk driving, use of unsafe vehicles, not wearing helmets, use of mobiles etc.
  - Recognizing the use of IT enabled enforcement equipment.
  - Recognition of driver refreshing training course as a remedial measure in case of suspension of license.

- viii. Mandatory automated testing for fitness certification.
- ix. Constitution of National Road safety Board to render advice on Road Safety and Traffic Management.

**B. Speedy assistance to Accident Victims**

- i. Protection of Good Samaritans who help accident victims
- ii. Heavy Penalties on those not giving way to Ambulances
- iii. Cashless treatment during golden hour
- iv. Faster and hassle-free provisions for compensation of Rs 2.5 lacs for grievous hurt and Rs 5 lacs for death
- v. Enhanced compensation of Rs two lacs in case of death and fifty thousand for grievous hurt for victims of hit and run accidents
- vi. Simplification of procedures for 3<sup>rd</sup> Party Insurance and hired Driver brought under the insurance cover.

**C. Simplification and citizen facilitation**

- i. Permitting issue of driving license anywhere in the State
- ii. Facilitating grant of online learning license.
- iii. Registration of new vehicles at the dealer's end including grant of registration number before the delivery of the vehicle is given.
- iv. Renewal of transport license after five years as against present provision of three years.
- v. Documentation permissible in electronic form.
- vi. Provision for recycling of vehicles
- vii. Adapted vehicles for Divyang

**D. Strengthening Public Transport**

- i. Aggregators recognized as a legal entity
- ii. Promote Rural Transport
- iii. Promote Public Transport
- iv. Promote last mile connectivity
- v. National and State level Transportation plans
- vi. States can formulate Schemes for promotion of public transport waiving the conditions in the Act.

**E. Automation and Computerization**

- i. Promoting use of electronic forms and documents.
- ii. Migration from State registers of driving licence and vehicle registration to National level database.

**F. Empowerment of States**

- i. Compound offenses at amounts equal to the penalty or higher amounts

- ii. Impose a multiplier up to 10 to any penalty
- iii. Exempt the requirement of Stage Carriage in interest of rural transport
- iv. Exempt the requirements for promoting the last mile connectivity
- v. Can authorize any other person to exercise the powers
- vi. Regulating pedestrians movements and non-motorized traffic

### **10.3 Implementation Status of the Motor Vehicles (Amendment) Act, 2019.**

10.3.1 Ministry of Road Transport &Highways vide notification S.O 3110(E) dated 28.08.2019 and S.O 3147(E) dated 30.08.2019 has appointed 1st day of September 2019 as the date on which around sixty sections of the Motor Vehicles (Amendment) Act, 2019 related to the following had come into force.

- Enhanced penalties for the offences under the Motor Vehicles Act
- Requirement of minimum educational qualification for license to drive transport vehicles has been removed.
- Facilitation of the licensing process so that the citizen can apply anywhere in the State for obtaining the Learner License, Driving License or Renewal
- Allowing driving License holders to apply for renewal any time between one year before its expiry up to one year after its expiry. This will greatly help our citizens working and staying abroad.
- Facilitation of the process of registration of vehicles process so that the citizen can apply anywhere in the State for registering the vehicles or recording any other changes
- Provisions which provide for powers to the Central and the State Governments for formulation of rules

10.32 For implementation of the rest of the provisions of the Motor Vehicles (Amendment) Act, 2019, the Ministry is in the process for finalizing the amendments in the Central Motor Vehicles Rules, 1989 consequent to the notification of the Motor Vehicles (Amendment) Act, 2019 (MVAA) so that the remaining provisions of the Motor Vehicles (Amendment) Act 2019 can be enforced. **The status of the formulation of rules is as under:**

#### **i. National Road Safety Board:**

Section 215 B of the amended MVA 2019 provides for establishment of the National Road Safety Board for giving advice to the Central Government and the State Governments in respect of Road safety and Traffic Management. MORTH has finalized the Rules for the Board and sent the same to the Ministry of Law and Justice for vetting. The comments received from Ministry of Law and Justice are since being addressed by MORTH..

#### **ii. Good Samaritan Rules:**

As required under section 134A of the amended Act, MORTH has since finalized the Rules for Good Samaritans in consultation with the Ministry of Law and Justice and the Rules

have been published on 30.9.20.

**iii. New Helmets conforming to BIS norms:**

In order to bring two wheeler helmet under the compulsory regime of BIS certification in the country, MORTH has issued a draft notification on 30.7.20 inviting comments of the stakeholder/ public before finalization. The final notification is expected to issue by end October 2020. This will enable only BIS approved and certified helmets to be manufactured and sold in India and will promote Road safety by reducing fatal injuries in two wheelers. The Ministry is also working on laying down Rules for Child helmets.

**iv. Schemes for Compensation to the Road Accident Victims:**

**(i) Scheme for cashless treatment of Road Accident Victims during the Golden hour:** Section 162 of the MVA empowers the Central Government to make the scheme for cashless treatment for Road Accident victims. The proposal is under consultation with States, National Health Authority(NHA) and NHAI.

**(ii) Compensation for Victims of Hit and run:** Earlier the Solatium Scheme was used to provide compensation to the Victims of Hit and Run cases. The compensation for Hit and Run cases has since been enhanced for both cases of death and grievous hurt and would be funded out of the Motor Accident Fund.

**(iii) Creation of a Motor Vehicle Accident Fund:** Section 164B of the Ammended Act empowers the Central Government to establish a fund named Motor Vehicle Accident Fund. Both Schemes for Cashless treatment during the Golden Hour and Hit and Run cases will now be funded from the Motor Vehicle Accident Fund . The draft Rules for operation, funding and disbursement from this fund are under formulation.

**v. For Sections of the MVAA pertaining to provisions relating to** Licensing of drivers, Fitness and Registration of motor vehicles, the Ministry has notified draft GSR 184 (E) dated 18 March 2020 to seek public comments. However, these draft rules were re-published seeking comments for two months vide GSR 336 (E) dated 29 May 2020 to provide adequate opportunity for stakeholders to examine the notification again and provide comments and suggestions due to conditions of Lockdown.

**vi For Sections of the MVAA regarding Control of Transport Vehicles and Road Safety**

- Guidelines for Authorized Vehicle Scrapping Facility (AVSF) is under discussion.
- Aggregator guidelines are also under discussion in the Ministry.

# Disparity of total figures from 9459 of Format 4 to 16418(770+15648) in Format 20 is due to the repeated entry of road users in Column No.1 to 9 ie, one or more type of vehicles or road users in same accident had included in different rows as per Format 20.

## Appendix - II

### Explanation of terms used in the Report:

<b>Accident Type</b>	<b>Definition</b>
<b>Fatal Accident</b>	A fatal accident is one in which one or more persons are killed as a result of the accident, provided death occurs within 30 days.
<b>Serious Injury Accident</b>	A serious injury accident is defined as either for which a person is detained in hospital as an “ <b>in patient</b> ” or if any one of the following injuries are sustained whether or not he or she is detained in the hospital:- fractures, concussions, internal injuries, crushing, severe cuts and lacerations or severe general shock requiring medical treatment and <b>victim require ICU admission</b> .
<b>Major Injury Accident</b>	A major injury accident is defined as either for which a person is detained in hospital as an “ <b>in patient</b> ”, or if any one of the following injuries are sustained whether or not he or she is detained in the hospital:- fractures, concussions, internal injuries, crushing, severe cuts and lacerations or severe general shock requiring medical treatment but <b>does not require ICU admission</b> .
<b>Grievous Injury Accident</b>	Includes both Serious injury accident and Major injury accident defined above.
<b>Minor Injury Accident</b>	Minor accident is one in which there are no deaths or serious injuries but a person is slightly injured. This will be an injury of minor nature such as a cut, sprain or bruise, where only first aid is required and <b>does not require hospitalisation</b> .
<b>No Injury Accident (Damage only Accident)</b>	One in which no one is injured but damage to vehicle and/or property sustains.
<b>Road Accident Risk</b>	Number of Accidents per Lakh Population
<b>Road Accident Death Risk:</b>	Number of Persons Killed per Lakh Population
<b>Road Accident Rate</b>	Number of Accidents Per Ten Thousand Vehicles
<b>Road Accident death rate</b>	Number of Persons killed Per Ten Thousand Vehicles
<b>Vehicle Density</b>	Number of Vehicles per Km of Road
<b>Pedestrian</b>	Any person other than a driver or passenger. Persons in or operating pedestrian conveyance such as perambulator, invalid chair without engine, push cart etc or pulling a cycle are Pedestrians. Persons attending to a vehicle (e.g for change or tyre, repairing engine etc) moving on roller skates, etc are also pedestrians..
<b>Type of Collision</b>	
<b>Run off road</b>	This is a type of road traffic collision in which only one vehicle is involved. Contributing factors include such as loss of control or mis-judging a curve, or attempting to avoid colliding with another road user or an animal
<b>Head on collision</b>	where the front ends of two vehicles hit each other in opposite directions
